Emergent Literacy Bettina Kümmerling-Meibauer 2011 This edited volume constitutes the first serious, sustained examination of the study of children's books for children aged from 0 to 3 with contributions by scholars working in different domains and attempting to assess the recognition of the role and influence of children's literature on the cognitive, linguistic, psychological and aesthetic development of young children. This collection achieves a balance between theoretical, empirical, historical and cross-cultural approaches by examining the broad range of children's books for children under three years of age, ranging from early-concept books through wimmelbooks and ABC books for small children to picture books that support the young child's acquisition of behavioral norms. Most importantly, the chapters proffer new insights into the strong relationship between children's books for young children and emergent literacy, drawing on current research in children's literature research, visual literacy, cognitive psychology, language acquisition, picture theory and pedagogy."

Language Diversity, School Learning, and Closing Achievement Gaps National Research Council 2010-08-26 The Workshop on the Role of Language in School Learning: Implications for Closing the Achievement Gap was held to explore three questions: What is known about the conditions that affect language development? What are the effects of early language development on school achievement? What instructional approaches help students meet school demands for language and reading comprehension? Of particular interest was the degree to which group differences in school achievement might be attributed to language differences, and whether language-related instruction might help to close gaps in achievement by helping students cope with language-intensive subject matter especially after the 3rd grade. The workshop provided a forum for researchers and practitioners to review and discuss relevant research findings from varied perspectives. The disciplines and professions represented included: language development, child development, cognitive psychology, linguistics, reading, educationally disadvantaged student populations, literacy in content areas (math, science, social studies), and teacher education. The aim of the meeting was not to reach consensus or provide recommendations, but rather to offer expert insight into the issues that surround the study of language, academic learning, and achievement gaps, and to gather varied viewpoints on what available research findings might imply for future research and practice. This book summarizes and synthesizes two days of workshop presentations and discussion.

Language Intelligence Or Universal English Ray Rimalette 2013-08 "Language Intelligence or Universal English" by Dr. Rimalette Ray The book "Language Intelligence or Universal English" - is a collection of the three volumes, Book One, Book Two, and Book Three, that represent the three parts of one, interconnected auto-training remedial course on renewing any language intelligence, in general, and the English language intelligence, in particular. Language fitness is the main prerogative of all the three books. Without a doubt,

the globalization of economy and a new technological revolution require that we display a much higher level of language habits and speech skills, the skills that do not only meet our immediate needs of communication in English, but also the skills that generate new business opportunities and help us promote an intelligent network building, using English as the main web-tool. Building solid language intelligence is vital for rationalizing our lives at the present choice-driven and digitally focused times. The books are helping to create breakthroughs for developing new language intelligence that, in turn, will help readers build up emotional, professional, cultural, and social intelligences that are at the core of global communication now and that are the main concepts of the book " "Living Intelligence" that is, coming out next. Book One- is a remedial course of linguistic apprenticeship. It's a theoretical book that is addressed to language learners/speakers who are willing to rationalize and remedy their native or the English language knowledge in the brain. There is an urgent need for language learners to know how language is being processed in the brain to be able to operate it in a much more scientifically-informed way, neuroscience-wise. It also presents a new paradigm of language learning based on the Method of the Right Language Behavior, worked out by Dr. Rimalette Ray, a doctor of Psycholinguistics. Book Two is a practical course. It presents the Method of the Right Language Behavior in action, focusing on remedying a reader's Pronunciation, Grammar and Vocabulary habits. It contains and very well structured chunks of basic brain-focused information, and it presents the practical shot-cuts on how to build up the operative language awareness in English Book Three is a remedial course, based on the ways that are considerably improving readers' Speaking, Writing, Reading, and Listening Skills. It contains the shot-cuts of the remedial work on the speech skills and the know-how to better choreograph them in face-to-face and digital communication. Be Language - Fit to Succeed!

Transforming the Workforce for Children Birth Through Age 8 National Research Council 2015-07-23

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Computer Corpora and Open Source Software for Language Learning: Emerging Research and

Opportunities Posavec, Kristina 2020-04-03 During the last four decades, a corpus-based approach to language teaching has become very significant. Direct use of corpora in language pedagogy is limited by certain factors: time, the lecturer's knowledge and skills needed to analyze the corpus, access to sources such as computers and appropriate computer tools, or a combination of these factors. The key to a successful corpus-based approach is in the appropriate level of the lecturer's guidance or pedagogical mediation, which depends on student age, experience, and prior knowledge. It is therefore very important that lecturers be equipped with the necessary knowledge and education for using and analyzing corpora on a daily basis. Computer Corpora and Open Source Software for Language Learning: Emerging Research and Opportunities is a cutting-edge research publication that analyzes teacher experiences in implementing computer corpora into their language learning classrooms in order to formulate additional insights as to best strategies for integrating such tools that maximizes language learning efficiency in primary and secondary education. Highlighting topics such as ICT tools, language education, and linguistics, this book is ideal for academicians, educators, computer science teachers, IT professionals, researchers, and students.
