The Tall Buildings Reference Book David Parker 2013-04-12 As the ever-changing skylines of cities all over the world show, tall buildings are an increasingly important solution to accommodating growth more sustainably in today's urban areas. Whether it is residential, a workplace or mixed use, the tower is both a statement of intent and the defining image for the new global city. The Tall Buildings Reference Book addresses all the issues of building tall, from the procurement stage through the design and construction process to new technologies and the building's contribution to the urban habitat. A case study section highlights the latest, the most innovative, the greenest and the most inspirational tall buildings being constructed today. A team of over fifty experts in all aspects of building tall have contributed to the making of the Tall Buildings Reference Book, creating an unparalleled source of information and inspiration for architects, engineers and developers.

Working with Map Projections Fritz Kessler 2019-05-03 A map projection fundamentally impacts the mapmaking process. Working with Map Projections: A Guide to Their Selection explains why, for any given map, there isn't a single "best" map projection. Selecting a projection is a matter of understanding the compromises and consequences of showing a 3-D space in two dimensions. The book presents a clear understanding of the processes necessary to make logical decisions on selecting an appropriate map projection for a given data set. The authors discuss the logic needed in the selection process, describe why certain decisions should be made, and explain the consequences of any inappropriate decision made during the selection process. This book also explains how the map projection will impact the map's ability to fulfill its purpose, uses real-world data sets as the basis for the selection of an appropriate map projection, and provides illustrations of an appropriately and inappropriately selected map projection for a given data set. The authors take a novel approach to discussing map projections by avoiding an extensive inventory of mathematical formulae and using only the mathematics of map projections that matter for many mapping tasks. They also present information that is directly applicable to the process of selecting map projections and not tied to a specific software package. Written by two leading experts, this book is an invaluable resource for anyone studying or working with geospatial data, from students to experienced professionals, and will help readers successfully weigh the pros and cons of choosing one projection over another to suit a map's intended purpose.

Cartography from Pole to Pole Manfred Buchroithner 2013-08-16 This volume comprehends a selection of papers presented during the 26th International Cartographic Conference held in Dresden from the 26th to the 30th of August 2013. It covers many fields of relevant Mapping and GIS research subjects, such as cartographic applications, cartographic tools, generalisation and update Propagation, higher dimensional visualisation and augmented reality, planetary mapping issues, cartography and environmental modelling, user generated content and spatial data infrastructure, use and usability as well as cartography and GIS in education.

Map Projections Erik W. Grafarend 2014-09-11 In the context of Geographical Information Systems (GIS) the book offers a timely review of Map Projections. The first chapters are of foundational type. We introduce the mapping from a left Riemann manifold to a right one specified as conformal, equiaerial and equidistant, perspective and geodetic. In particular, the mapping from a Riemann manifold to a Euclidean manifold ("plane") and the design of various coordinate systems are reviewed. A speciality is the treatment of surfaces of Gaussian curvature zero. The largest part is devoted to the mapping the sphere and the ellipsoid-of-revolution to tangential plane, cylinder and cone (pseudo-cone) using the polar aspect, transverse as well as oblique aspect. Various Geodetic Mappings as well as the Datum Problem are reviewed. In the first extension we introduce optimal map projections by variational calculus for the sphere, respectively the ellipsoid generating harmonic maps. The second extension reviews alternative maps for structures, namely torus (pneu), hyperboloid (cooling tower), paraboloid (parabolic mirror), onion shape (church tower) as well as clothoid (High Speed Railways) used in Project Surveying. Third, we present the Datum Transformation described by the Conformal Group C10 (3) in a

threedimensional Euclidean space, a ten parameter conformal transformation. It leaves infinitesimal angles and distance ratios equivariant. Numerical examples from classical and new map projections as well as twelve appendices document the Wonderful World of Map Projections.

In the Space of Reasons Wilfrid Sellars 2007 Sellars (1912-1989) was, in the opinion of many, the most important American philosopher of the second half of the twentieth century. This collection, coedited by Sellars's chief interpreter and intellectual heir, should do much to elucidate and clearly establish the significance of this difficult thinker's vision for contemporary philosophy.

Florence at the Dawn of the Renaissance J. Paul Getty Museum 2012 Florence and the Renaissance have become virtually synonymous, bringing to mind names like Dante, Giotto, Petrarch, Boccaccio, and many others whose creativity thrived during a time of unprecedented prosperity, urban expansion, and intellectual innovation. With more than 200 illustrations, Florence at the Dawn of the Renaissance reveals the full complexity and enduring beauty of the art of this period, including panel paintings, illuminated manuscripts, and stained glass panels. The book considers not only the work of Giotto and other influential artists, including Bernardo Daddi, Taddeo Gaddi, and Pacino di Bonaguida, but also that of the larger community of illuminators and panel painters who collectively contributed to Florence's artistic legacy. It places particular emphasis on those artists who worked in both panel painting and manuscript illumination, and presents new conservation research and scientific analyses that shed light on artists' techniques and workshop practices of the times. Reunited here for the first time are twenty-six leaves of the most important illuminated manuscript commission of the period: the Laudario of Sant' Agnese. The splendor of this book of hymns exemplifies the spiritual and artistic aspirations of early Renaissance Florence. A major exhibition on this subject will be on view at the J. Paul Getty Museum November 13, 2012, through February 10, 2013, and at the Art Gallery of Ontario March 16, 2013, through June 16, 2013. Contributors to this volume include Roy S. Berns, Eve Borsook, Bryan Keene, Francesca Pasut, Catherine Schmidt Patterson, Alan Phenix, Laura Rivers, Victor M. Schmidt, Alexandra Suda, Yvonne Szafran, Karen Trentelman, and Nancy Turner.
