Savage Sand and Surf Lisa A. Eargle 2015-04-02 It was almost November

2012 when Hurricane Sandy, a late arrival in an otherwise quiet tropical season, slammed into the Mid-Atlantic US coastline. Millions of residents were plunged into darkness and billions of dollars in property and infrastructure were flooded or washed away in surging waters. Blizzard conditions struck the Appalachians as the hybrid Halloween monster moved inland. *Savage Sand and Surf: The Hurricane Sandy Disaster* is multi-faceted examination into one of the most recent natural disasters in the United States. Scholars from multiple disciplines address a wide range of important aspects of this event, including unique meteorological and social impacts of Sandy, Sandy's intersection with vulnerable social groups in society, and social institutions' adaptations to the disaster. Also, different theoretical models of disasters are explored and applied to better understand and prepare for similar events in the future.

Atlas of Sand Grain Surface Textures and Applications W. C. Sand Movement Along a Portion of the Northern California Coast

John Cherry 1965 Long-term beach and offshore sand movement along the northern California coast between Drakes Bay and Russian River is studied. Analysis of wave, sand and geological data, coupled with known configurations and behavioral processes of stable beaches, suggests little net alongshore movement under present conditions and that beaches are generally in equilibrium with negligible loss. This analysis is confirmed through heavy mineral analysis of surface samples. Point Reyes and Bodega Head are indicated to be effective littoral barriers to alongshore transport. (Author).

Sexual Misconduct in Counseling and Ministry Peter T. Mosgofian 2009-05-01 Sexual misconduct by ministers and other Christian

professionals has reached epidemic proportions. One major church insurer has handled over 1,200 cases in the past eight years, many involving child sexual abuse, often with multiple victims. How should the church respond when Christian counselors cross sexual boundaries? What should be done when the healer wounds? What is the church's responsibility both to misbehaving professionals and to their victims? Combining their extensive counseling experience and legal expertise, the authors of this volume offer a well-written, practical book loaded with the thorny issues of sexual exploitation by religious professionals. Here is tested wisdom that can help.

- o A recovery strategy for victims
- o Proactive ways to safeguard against improper sexual behavior
- o Screening and early intervention strategies
- o Restoring fallen ministers and church leaders
- o Dealing with homosexual misbehavior, seductive clients, recovered memories, and false allegations
- o Assessing legal consequences of your policies

The wise counsel in this timely book can help us find remedies for a growing problem that threatens the Christian church.

A Tide-swept Coast of Sand and Marsh Miles O. Hayes 2013-01-01 This book will help you explore the origins of coastal features, such as barrier islands, sand beaches and coastal dunes. It unravels the wonderful mystery of how the extensive Georgia salt marshes evolved. Furthermore, it explains the changing face of the coastline through deposition and erosion during major storms. The key ecological resources are described in detail for each of the major subdivisions of the coast. Through richly illustrated diagrams, full-color photographs, and satellite images this general treatment of the coastal geology and ecology of Georgia will help you understand this exceptional coast through a delightful and completely comprehensible narrative.

Size Analysis of Sand Samples from Southern New Jersey Beaches

Michael D. Ramsey 1977 The size of sand on Atlantic coast beaches of southern New Jersey was studied by analyzing 788 sand samples. In north-to-south order, the samples were collected by Island Beach, Long Beach Island, Brigantine, Atlantic City, and Ludlam Island. Sand size generally decreased from north to south, with size at the two northernmost sites noticeably coarser on the average than the size at the three southern sites. Results from Long Beach Island, Atlantic City, and Ludlam Island, where most of the data were collected, indicate that size, averaged by beach, decreases from 0.33 millimeter at Long Beach Island in the north, through 0.27 millimeter at Atlantic City, to 0.23 millimeter at Ludlam Island in the south. Size, averaged by profile line, varies from 0.34 millimeter at a profile on the northern half of Long Beach Island, 0.20 millimeter at a profile in the middle of Ludlam Island. Size also varies with position across the profile from low tide terrace to landward edge of berm, tending to decrease landward across the average of three profiles on Atlantic City and three profiles on Ludlam Island, but tending to increase landward across the average of four profile lines on Long Beach Island. Maximum variation at one Beach, averaged by position on profile, occurs at Long Beach Island where the average size increased from 0.28 millimeter on the low tide terrace to 0.36 millimeter on the berm. Size variation by month suggests a tendency for sand to be finer during late summer and early fall, but data do not permit identification of a consistent annual cycle.

Contemporary Sand Sculpture E. Ashley Rooney 2018-01-17 Part performance art and part engineering, sand sculpture has become amazingly sophisticated as artists explore the boundaries of their skill

with sand as a medium. Within a very short time, a sculptor can create an awesome, thought-provoking experience that will completely vanish after a few weeks. The photographs are all that's left. Barbara Purchia and E. Ashley Rooney take you on a round-the-world tour of sandscapes showcasing a dazzling array of sculptural figures, forms, and styles. Behind-the-scenes interviews with the sand masters reveal what motivates them and how they approach their art. Todd Vander Pluym, the world's premier sand artist and president of Sand Sculptors International (SSI), shares a contemporary history of sand sculpture, and renowned international sculptor Kirk Rademaker describes how he built a new life around this ephemeral medium. The images of these art pieces will have you wanting to stick your toes in the sand!

The Gwithian Landscape: Molluscs and Archaeology on Cornish

Sand Dunes Thomas M. Walker 2018-03-31 Gwithian, on the north coast of Cornwall, is a multiperiod archaeological site. The present work explores the palaeoenvironment of the area around the settlement sites, from the Neolithic, when sand dunes initially developed in the Red River valley, to the present post-industrial landscape.

Dune Worlds Ralph D. Lorenz 2014-04-22 This book describes how sand dunes work, why they are the way they are in different settings, and how they are being studied. Particular attention is paid to their formation and appearance elsewhere in the solar system. New developments in

knowledge about dunes make for an interesting story - like the dunes themselves, dune science is dynamic - and the visual appeal of Aeolian geomorphology ensures that this is an attractive volume. The book is divided into 4 parts, the first of which introduces dunes as a planetary phenomenon, showing a landscape reflecting the balance of geological processes - volcanism, impact, tectonics, erosion, deposition of sediments. Dunes are then considered as emergent dynamical systems: the interaction of sand and wind conspires to generate very characteristic and reproducible shapes. Analogies are given with other emergent structures such as patterned ground before the influence of dunes on desert peoples and infrastructure is studied, together with their use as forensic climatological indicators. Dune Physics is looked at with regard to the mechanics of sand, the physics of wind, saltation - interaction of sand and air - dunes versus ripples and transverse Aeolian ridges, the classification of dune morphology and the sources and sinks of sand. Dune Trafficability considers soil mechanics, effects on mobility on Earth, Mars and elsewhere. In the second part, Earth, Mars, Titan and other moons and planets are examined, beginning with a survey of the major deserts and dunefields on Earth. The authors then turn to Mars and its environment, sediment type, dune stratigraphy, sediment source and sinks and the association of dunes with topographic features. Titan follows - its thick, cold atmosphere, methane dampness, low gravity, morphology - interaction with topography and the implications of dunes for climate and winds. Dunes elsewhere conclude this part. There are few dunefields on Venus, but there is a possibility of Aeolian transport on Triton and volcanic-related windstreaks on Io.

Renewable Energy in Marine Environment Eugen Rusu 2020-03-25 The effects of human-caused global warming are obvious, requiring new strategies and approaches. The concept of business-as-usual is now no longer beneficial. Extraction of renewable energy in marine environments represents a viable solution and an important path for the future. These huge renewable energy resources in seas and oceans can

be harvested, including wind, tide, and waves. Despite the initial difficulties related mostly to the elevated operational risks in the harsh marine environment, newly developed technologies are economically effective or promising. Simultaneously, many challenges remain to be faced. These are the main issues targeted by the present book, which is associated with the Special Issue of *Energies* Journal entitled "Renewable Energy in Marine Environment". Papers on innovative technical developments, reviews, case studies, and analytics, as well as assessments, and papers from different disciplines that are relevant to the topic are included. From this perspective, we hope that the results presented are of interest to for scientists and those in related fields such as energy and marine environments, as well as for a wider audience.

Approaches to Teaching Sand's Indiana David A. Powell 2015-11-01 Indiana, George Sand's first solo novel, opens with the eponymous heroine brooding and bored in her husband's French countryside estate, far from her native Île Bourbon (now Réunion). Written in 1832, the novel appeared during a period of French history marked by revolution and regime change, civil unrest and labor concerns, and slave revolts and the abolitionist movement, when women faced rigid social constraints and had limited rights within the institution of marriage. With this politically charged history serving as a backdrop for the novel, Sand brings together Romanticism, realism, and the idealism that would characterize her work, presenting what was deemed by her contemporaries a faithful and candid representation of nineteenth-century France. This volume gathers pedagogical essays that will enhance the teaching of *Indiana* and contribute to students' understanding and appreciation of the novel. The first part gives an overview of editions and translations of the novel and recommends useful background readings. Contributors to the second part present various approaches to the novel, focusing on four themes: modes of literary narration, gender and feminism, slavery and colonialism, and historical and political upheaval. Each essay offers a fresh perspective on *Indiana*, suited not only to courses on French Romanticism and realism but also to interdisciplinary discussions of French colonial history or law.

Gender in the Fiction of George Sand Massardier-Kenney 2023-11-20 In *Gender in the Fiction of George Sand*, Françoise Massardier-Kenney argues that the major nineteenth-century French writer George Sand articulates in her novels a complex and extremely modern conception of gender, questioning prevalent patriarchal modes of discourse and redefining masculinity and femininity. Through the analysis of a representative sample of Sand's works (*Indiana*, *Jacques*, *La dernière Aldini*, *Jeanne*, *Horace*, *Valv'dre*, *Melle la Quintinie*, *Gabriel*, *Lucrezia Floriana*, and *Nanon*), Massardier-Kenney uncovers the themes and strategies used by Sand to challenge essentializing and negative representations of women. *Gender in the Fiction of George Sand* demonstrates the centrality of Sand's pioneering exploration of the construction of gender. This original study will be of interest to scholars of nineteenth-century French literature and culture, women's literature, and gender studies.

Daily Changes in Beach Profile and Sand Texture on Del Monte Beach, California John C. Harlett 1967 Beach-elevation measurements were made and sand samples were collected along a single profile daily at low tide during the period from February 1 through March 31, 1967. Wave and tide data were recorded continuously. The beach, composed of medium-to-fine quartz and feldspar sand, is well sheltered from wave action. Wave steepness exerts a great influence on the beach profile. An equilibrium profile was found to exist for a given wave steepness. As wave conditions change, the beach profile tends to change toward the equilibrium profile associated with the new wave steepness. Given an initial beach profile, the amounts of cut and fill that will occur with a given change in wave steepness can be predicted. Textural parameters do not appear to be related to changing wave conditions in a simple way. Equilibrium values of mean grain size, sorting, skewness, and kurtosis exist for any given location on the beach profile. The equilibrium values are apparently independent of wave conditions. (Author).

Disguise in George Sand's Novels Françoise Ghillebaert 2009 Sandian heroines swirl around men in their sororal and sartorial disguises like moths around candle flames. However, as Disguise in George Sand's Novels illustrates, the disguise is not an instrument to seduce men but rather to assert the heroines' true selves. The portrayal of female and androgynous protagonists in *Rose et Blanche* (1831), *Indiana* (1832), *Lélia* (1833/39), *Gabriel* (1839), *Consuelo* (1842), and *La Comtesse de Rudolstadt* (1844) is a metaphor to demonstrate the continuity of identities before and after the disguise as George Sand stipulates in her theory of the *ménechme*. Disguise in George Sand's Novels explores the maturation process of Romantic and artistically inclined heroines and highlights the spiritual meaning of the disguise as a rite of passage for the birth of a new type of protagonist: spiritual, self-assertive, and dedicated to erasing gender inequality and helping the poor.

Nigerian Gods Erubu Ootobo 2023-05-05 *Nigerian Gods* is an enlightening and sobering review of the impact of the introduction of the three main Abrahamic religions on Nigeria's traditional religions, culture and way of life, viewed through the prism of its eleven largest and two of the smallest ethnic groups. Kome Ootobo, gives here a factual and acute description and presentation of the main characteristics of the major ethnic groups in Nigeria - historical background and socio-political structures, demography, traditional religions, differing impacts of Judaism, Christianity, Islam, and major occupations and modes of existence - which should serve to propel all to a fuller assessment of the complexities of the directions which a Post-Covid-19 World is tending

rapidly, ethnically and racially exploited differences jumping to the fore to question erstwhile dominant political ideologies and political arrangements based on them.
