New Traditional Games for Learning Alex Moseley 2013-09-05 A growing interest in the use of games-based approaches for learning has been tempered in many sectors by budget or time constraints associated with the design and development of detailed digital simulations and other high-end approaches. However, a number of practitioners and small creative groups have used low-cost, traditional approaches to games in learning effectively - involving simple card, board or indoor/outdoor activity games. New Traditional Games for Learning brings together examples of this approach, which span continents (UK, western and eastern Europe, the US, and Australia), sectors (education, training, and business) and learner styles or ages (primary through to adult and work-based learning or training). Together, the chapters provide a wealth of evidence-based ideas for the teacher, tutor, or trainer interested in using games for learning, but turned off by visible high-end examples. An editors' introduction pulls the collection together, identifying shared themes and drawing on the editors' own research in the use of games for learning. The book concludes with a chapter by a professional board game designer, incorporating themes prevalent in the preceding chapters and reflecting on game design, development and marketing in the commercial sector, providing valuable practical advice for those who want to take their own creations further.

*Responding in Mental Health-Substance Use* David B. Cooper 2020-09-23 Mental health-substance use is a complex interrelation, with equally complex implications for individuals and their families, health professionals and society. Although its international recognition as an issue of critical importance is growing, clear guidance for professionals on mental health-substance use and its treatment is hard to find. The Mental Health-Substance Use series addresses this need, concentrating on concerns, dilemmas and concepts that impact on the life and well-being of affected individuals and those close to them, and the future direction of practice, education, research, services, interventions, and treatment. Having outlined the field and service development in previous books, the third book in the series explores how professionals can best respond to the particular concerns and dilemmas arising from and in mental health-substance use for individuals and their families. It aims to inform, develop and educate these responses by sharing knowledge and enhancing expertise in this fast-developing field by exploring the interrelated psychological, physical, social, legal and spiritual experiences. The volumes in this series are designed to challenge concepts and stimulate debate, exploring all aspects of the development in treatment, intervention and care responses, and the adoption of research-led best practice. They are essential reading for mental health and substance use professionals, students and educators.

**Travels in the Trench Between Child Welfare Theory and Practice** George Thomas 1994 Travels in the Trench Between Child Welfare Theory and Practice examines how the child welfare field's rush to establish credibility and permanence through program growth during the post World War II era gave rise to a massive but fragile conglomerate unprepared to prove its merits when challenged by an increasingly dubious public. Author George Thomas proposes a broad-based shift from program growth to knowledge-based growth in policy, management, education, research, and information technology initiatives

to revitalize performance and restore public confidence in the system. Thomas's book proposes to shift the leadership emphasis away from the "big business" flavor of child welfare and re-define it into a mediator role of trusting worker and client competencies. *Travels in the Trench Between Child Welfare Theory and Practice* shows how the two sides merge and concentrate on five key issues: Policy--Contrasts the impact of the two orientations on shaping the field's sense of mission, defining its role, establishing its priorities for growth relative to size, specialization, and knowledge base, and stimulating or reducing client adversarialism and public perceptions of chronic mission failure. Management--Examines how the priorities of the two orientations differ relative to preserving hierarchical authority, rewarding work that exceeds mandates, promoting innovation and experimentation, and relying on process as distinct from client outcome accountability. Education--Examines how the priorities of the two orientations differ relative to relying on manpower and brain power, on "one right way" of doing things versus doing what is legal and ethical. Research--Examines how the priorities of the two orientations differ relative to confirming the "rightness" of the field's existing knowledge base and testing it to expand its scientifically validated portion through discovery. Information Technology--Explores how the priorities of the two orientations differ relative to disclosing and preserving privileged communications, developing common and specialized language, and breaking down or protecting authority and status differentials. This historical and cross-sectional analysis forms a framework proposing that the field's future value in meeting the nation's child welfare needs must have a willingness to shift its commitments from problem to competency-oriented theory and practice, to accept a de-emphasis on growth and a reduction in specialization, and to redirect investments in education, research, and information technology. According to Thomas, this enables readers to revitalize practice wisdom, grow the scientifically validated portion of the field's knowledge base, and begin to restore public confidence in the system. The book's contents are presented in interview style to enliven the material and make it more accessible to a wide audience. The reader determines the sense and direction of the analysis and the appropriateness of the questions from which it flows. *Travels in the Trenches* is intended to promote critical analysis of the link between long range vision and its impact on daily practice.

*Non-pharmacological Interventions for Mental Disorders* Lara Guedes De Pinho 2024-04-01 One of the side effects of the COVID-19 pandemic was the worsening of the symptomatology of mental disorders. The number of people with mental disorders has increased and pre-existing mental disorders have worsened, in many cases. Psychopharmacology alone is not sufficient for the treatment of conditions such as schizophrenia, depression, bipolar disorder, and generalized anxiety disorder, among others, and the combined use of psychopharmacology and non-pharmacological interventions is recommended by international guidelines. Despite this, most people around the world do not have access to non-pharmacological interventions and when they are diagnosed with a mental disorder, only psychopharmacological drugs are prescribed. In other cases, although non-pharmacological interventions, for example psychotherapy, are also prescribed, this response takes a long time.

Teachers College Library, Columbia University (G.K. Hall, 1970). *Mechanisms in the Chain of Safety* Dr Alex de Voogt 2012-10-01 How should we organize our selection or training procedures? In what way can a flight crew mediate problems? How are we to understand reported errors? *Mechanisms in the Chain of Safety* presents recent findings in aviation psychology, bringing fresh insights to such questions. Aviation psychologists study personnel selection and training; they evaluate the management of flight operations, and ultimately they analyse the things that went wrong. The strong interrelation between these components allows us to talk about a chain of safety. This volume appraises this chain of safety by considering the mechanisms that determine its effectiveness - input mechanisms, coping mechanisms and control mechanisms. Each contribution discusses a component of the chain while the book as a whole emphasizes and illustrates that understanding the connections between these parts is essential for the future. By addressing these issues the book leads to further considerations such as how mistakes are linked to training and how coping mechanisms should help us to understand errors and accidents. *Mechanisms in the Chain of Safety* will appeal to aviation professionals (human factors experts, safety managers, pilots, ATCOs, air navigation service providers, etc.) and academics, researchers, graduates and postgraduates in human factors and psychology. Although primarily written for the aviation industry, this book will also be of interest to other high-risk dynamic activities that face similar challenges: the need to present effective and safe outcomes to the public in general and the stakeholders in particular.
