NET, Abide Bible Thomas Nelson 2020-07-14 "Abide in me." John 15:4 Do you yearn for life-giving, intimate communion with God? The Abide Bible is designed to help you experience the peace, hope, and growth that come from encountering the voice and presence of God in Scripture. Every feature in Abide is designed to teach and develop Scripture-engagement habits that help you know the power and spiritual nourishment of abiding in Christ. Created in partnership with Bible Gateway and the Taylor University Center for Scripture Engagement, The Abide Bible's features include book introductions and practical Scripture-engagement prompts based on five ways of interacting deeply with the Bible: Praying Scripture: Pattern your prayers after biblical texts, personalizing the prayers and gaining language for the thoughts and emotions you want to express. Picture It: Place yourself in a biblical narrative as a bystander or participant in important events. Journaling: Focus and reflect on Scripture and its meaning for your life, opening yourself to God's voice as you ponder. Engage Through Art: Consider a classic piece of art—photograph, sculpture, painting—and let it deepen your meditations on scriptural truths. Contemplate: Follow the church's longstanding practice of reading, meditating on, praying, and contemplating a passage of Scripture in order to experience God's presence through the words of the Bible.

Eye of Newt and Toe of Frog, Adder's Fork and Lizard's Leg Marty Crump 2015-11-16 Recent estimates suggest that nearly 3 million people in the US alone keep an amphibian or reptile as a pet. YouTube videos with odes to cane toads are ubiquitous. And yet amphibians and reptiles also keep extermination companies in business, and are reviled by many. These emotions pose great challenges to the conservation of these species, just as their populations in the natural world are in great decline. It can be quite hard to inspire stewardship of a tomato toad in the same way that one can more generally charismatic fauna like pandas and polar bears. In response, herpetologists have created large-scale programs such as Amphibian Ark, the umbrella organization behind the Year of the Frog campaign, <http://www.amphibianark.org/>, to educate and enthrall citizens with the charm of the more slimy species of the planet. Few herpetologists have contributed more to the conservation of amphibians and reptiles than Marty Crump, a renowned expert on declining amphibians. This manuscript is her ode to the toad, a masterful compilation of science and narrative centering on human relations with amphibians and reptiles across the globe. An intrepid explorer and skilled writer, Crump has gathered stories and myths and paired them with natural history to give a wonderful view of how essential amphibians and reptiles are to our well being. Using symbolism, folklore, and science, the manuscript also explores the conservation consequences of our complicated amorous and vexed affair with snakes, frogs, toads and other herpetofauna.

Writing Science Through Critical Thinking Marilyn F. Moriarty 1997 Written and extensively class tested with NSF/NIH support, this timely and useful text addresses a crucial need which is acknowledged in most universities and colleges. It is the need for students to learn to write in the context of their field of study; in this case science. Although numerous "how to" writing books have been published, few, if any, address the central pedagogical issues underlying the process of learning to think and write scientifically. The direct connection between this writing skill and that of critical thinking is developed with engaging style by the author, an English professor. Moriarty's book is an invaluable guide for both undergraduate and graduate science students. In the process of learning the specific requirements of organization demanded by scientific writing, students will develop strategies for thinking through their scientific research, well before they sit down to write. This instructive text will be useful to students who need to satisfy

a science writing proficiency requirement in the context of a science course, a course in technical writing, advanced composition, or writing for the profession.

[THE GOLDEN SPRINGTIME](#) Steffen Pichler 2021-05-17 It is the year 2038, when life on our once so beautiful planet is nearing its end.

Famine, disease and escalating ecological destruction rage as an unstoppable avalanche of extreme viruses, fungi and other parasites rule freely, capitalising on mankind's misguided agricultural practice and genetic engineering. Civilisation is on the brink of collapse, but a desperate lie told by world leaders, offering a fantastic future to the condemned, creates a bizarre euphoria: The Golden Springtime of Man. While terrified humanity is temporarily appeased and exhilarated, in the background of the events every word, every theory and every equation ever written down in the history of civilisation is desperately re-examined for fresh wisdom by using a high-performance supercomputer. This search for salvation eventually leads all the way back to 1890 and unearths writings of a spoilt, aristocratic, English adventurer, who once journeyed to Australia to boost his ego and capture the biggest of all crocodiles. What he found instead, as one of the few white men to make deepest contact with Aboriginal hunter-gatherer tribes, was enlightenment that would radically expand humanity's knowledge and perception of the laws of nature and demand life as we know it to change. All eyes are wide open now, but is there enough time left to change everything and stop the apocalypse? Although the story is fictitious, its basis is not grounded in fantasy. The author himself has spend many years in nature, partly in far-north Australia. And shortly after its 2019 release in Germany, civilisation has already been brought to its knees by a devastating pandemic, of the type predicted in the book. *Science Books & Films* 1975

Children's Book Review Service Children's Book Review Service 1987 *Headless Males Make Great Lovers* Marty Crump 2008-11-15 The natural world is filled with diverse—not to mention quirky and odd—animal behaviors. Consider the male praying mantis that continues to mate after being beheaded; the spiders, insects, and birds that offer gifts of food in return for sex; the male hip-pocket frog that carries his own tadpoles; the baby spiders that dine on their mother; the beetle that craves excrement; or the starfish that sheds an arm or two to escape a predator's grasp. *Headless Males Make Great Lovers* and *Other Unusual Natural Histories* celebrates the extraordinary world of animals with essays on curious creatures and their amazing behaviors. In five thematic chapters, Marty Crump—a tropical field biologist well known for her work with the reproductive behavior of amphibians—examines the bizarre conduct of animals as they mate, parent, feed, defend themselves, and communicate. Crump's enthusiasm for the unusual behaviors she describes—from sex change and free love in sponges to aphrodisiac concoctions in bats—is visible on every page, thanks to her skilled storytelling, which makes even sea slugs, dung beetles, ticks, and tapeworms fascinating and appealing. Steeped in biology, *Headless Males Make Great Lovers* points out that diverse and unrelated animals often share seemingly bizarre behaviors—evidence, Crump argues, that these natural histories, though outwardly weird, are successful ways of living. Illustrated throughout, and filled with vignettes of personal and scientific interest, *Headless Males Make Great Lovers* will enchant the general reader with its tales of blood-squirting horned lizards and intestine-ejecting sea cucumbers—all in the service of a greater appreciation of the diversity of the natural histories of animals.

Eye of Newt and Toe of Frog, Adder's Fork and Lizard's Leg Marty Crump Frogs are worshipped for bringing nourishing rains, but blamed for devastating floods. Turtles are admired for their wisdom and longevity, but ridiculed for their sluggish and cowardly behavior. Snakes are respected for their ability to heal and restore life, but despised as symbols of evil. Lizards are revered as beneficent guardian spirits, but feared as the Devil himself. In this ode to toads and snakes, newts and tuatara, crocodiles and tortoises, herpetologist and science writer Marty Crump explores folklore across the world and throughout time. From creation myths to trickster tales; from associations with fertility and

rebirth to fire and rain; and from the use of herps in folk medicines and magic, as food, pets, and gods, to their roles in literature, visual art, music, and dance, Crump reveals both our love and hatred of amphibians and reptiles—and their perceived power. In a world where we keep home terrariums at the same time that we battle invasive cane toads, and where public attitudes often dictate that the cute and cuddly receive conservation priority over the slimy and venomous, she shows how our complex and conflicting perceptions threaten the conservation of these ecologically vital animals. Sumptuously illustrated, *Eye of Newt and Toe of Frog, Adder's Fork and Lizard's Leg* is a beautiful and enthralling brew of natural history and folklore, sobering science and humor, that leaves us with one irrefutable lesson: love herps. Warts, scales, and all.

Caddo 2015-01-20 In a stunning tribute to one of Texas' most enigmatic waterways, a veteran East Texas historian and a professional photographer have together created an homage to a lake like no other—half Texas, half Louisiana, a swampy labyrinth of bald cypress and water plants filled with mystery, legend, and a staggering amount of biological complexity. Classified as a Category 1 Habitat for wildlife by the US Fish and Wildlife Service and encompassing a state wildlife management area as well as a state park, Caddo Lake and adjacent areas have also been designated as a Ramsar Site under the international convention to preserve world-class wetlands and their waterfowl. In both words and pictures, writer Thad Sitton and photographer Carolyn Brown have captured the human, animal, and plant life of Caddo, as well as the history of the lake itself, better likened to an ever-changing network of cypress woodlands, bayou-like channels, water-plant meadows, and hardwood bottoms covered more or less by water. Frog Day Martha L. Crump 2024 "From morning to night and from the forest to the desert, what do frogs do all day? In this short book, celebrated biologist Marty Crump shows readers exactly how frogs spend their time. Each chapter covers a single frog during a single hour, highlighting twenty-four different species from around the globe. At midnight in Indonesia, we hear the rustle of leaves above. It's not a bird, but Wallace's flying frog, using its webbed feet and emerald-green skin flaps to glide through the forest canopy. Other amphibians might hide from the morning sun, but not Madagascar's orange-red tomato frog. If its showy coloration doesn't discourage predators, a sticky mucus-powerful enough to glue a snake's jaws together-provides a means of escape. At dusk, in a Peruvian rain forest, we see a giant spider-a hairy tarantula-and what looks like a tiny amphibian pet taking shelter in its burrow. Other frogs make a tasty meal for this tarantula, but the dotted humming frog is a friend, eating the ants that might otherwise make a meal of the tarantula's eggs. For each chapter, award-winning artist Tony Angell has depicted these scenes with his signature pen and ink illustrations. Working closely together to narrate and illustrate these unique moments in time, Crump and Angell have created an engaging read that is a perfect way to spend an hour or two-and a true gift for readers, amateur scientists, and all frog fans"--

The Humane Gardener Nancy Lawson 2017-04-18 In this eloquent plea for compassion and respect for all species, journalist and gardener Nancy Lawson describes why and how to welcome wildlife to our backyards. Through engaging anecdotes and inspired advice, profiles of home gardeners throughout the country, and interviews with scientists and horticulturalists, Lawson applies the broader lessons of ecology to our own outdoor spaces. Detailed chapters address planting for wildlife by choosing native species; providing habitats that shelter baby animals, as well as birds, bees, and butterflies; creating safe zones in the garden; cohabiting with creatures often regarded as pests; letting nature be your garden designer; and encouraging natural processes and evolution in the garden. The Humane Gardener fills a unique niche in describing simple principles for both attracting wildlife and peacefully resolving conflicts with all the creatures that share our world.
