*Fish Swimming in Turbulent Waters* Hubert Chanson  
2020-09-13 Low-level river crossings, including culverts, are important for delivering a range of valuable socioeconomic services, including transportation and hydrological control. These structures are also known to have negative impacts on freshwater river system morphology and ecology, including the blockage of upstream fish passage, particularly small-body-mass fish species. Given the enormous environmental problems created by road crossings, new hydraulic engineering guidelines are proposed for fish-friendly multi-cell box culvert designs. The focus of these guidelines is on smooth box culverts without appurtenance, with a novel approach based upon three

basic concepts: (I) the culvert design is optimized for fish passage for small to medium water discharges, and for flood capacity for larger discharges, (II) low-velocity zones are provided along the wetted perimeter in the culvert barrel, and quantified in terms of a fraction of the wetted flow area where the local longitudinal velocity is less than a characteristic fish speed linked to swimming performances of targeted fish species, and (III) the culvert barrel is smooth, without any other form of boundary treatment and appurtenance. The present monograph develops a number of practical considerations, in particular relevant to box culvert operations for less-than-design discharges. It is argued that upstream fish passage capabilities would imply a revised approach to maintenance, in part linked to the targeted fish species. This reference work is authored for civil and environmental engineers, as well as biology and ecology scientists interested in culvert design.

Tackle Box Troubles Susan Duke 2022-05-04 Sammy Spinner, an eager fishing bait, gets plopped into a tackle box alongside Bucky Bucktail, Francis Frog, and Suki Suick with one goal, to catch big fish. He sees shores lined with pine trees and large loons swimming on the water. He hears giggling eagles sitting in woody nests and beavers' thick tails building dams. Sammy believes he is well-prepared to get a fish into the red boat. However, he quickly learns catching fish that live in Northwoods Lakes could take thousands of casts. Sammy is dragged through chilly water filled with long grasses, slimy weeds, sunken logs, and lily pads that hide all types and sizes of fish. Sammy just cannot seem to catch one! Can the lures from Tackle Box Troubles teach Sammy fishing tips and a proper figure 8 to give him a better chance of

catching and releasing a big fish this summer?

*Advances in Artificial Life*

Mathieu Capcarrere  
2005-09-19

TheArtificialLife term appeared more than 20 years ago in a small corner of New Mexico, USA. Since then the area has developed dramatically, many researchers

joining enthusiastically and research groups sprouting everywhere. This frenetic activity led to the emergence of several strands that are now established fields in themselves. We are now reaching a stage that one may describe as maturer: with more rigour, more benchmarks, more results, more stringent acceptance criteria, more applications, in brief, more sound science. This, which is the natural path of all new areas, comes at a price, however. A certain enthusiasm, a certain adventurousness from the early years is fading and may have been lost on the way. The field has become more reasonable. To counterbalance this and to encourage lively discussions, a conceptual track, where papers were judged on criteria like importance and/or novelty of the concepts proposed rather than the experimental/theoretical results, has been introduced this year. A conference on a theme as broad as Artificial Life is bound to be very diverse, but a few tendencies emerged.

First, fields like 'Robotics and Autonomous Agents' or 'Evolutionary Computation' are still extremely active and keep on bringing a wealth of results to the A-Life community. Even there, however, new tendencies appear, like collective robotics, and more specifically self-assembling robotics, which represent now a large subsection. Second, new areas appear.
