**Cutthroat** Pat Trotter 2008  
Cutthroat tells the full story of the genuine native trout of the American West. This new edition, thoroughly revised and updated after 20 years, synthesizes what is currently known about one of our most interesting and colorful fishes, includes much new information on its biology and ecology, asks how it has fared in the last century, and looks toward its future. In a passionate and accessibly written narrative, Patrick Trotter, fly fisher, environmental advocate, and science consultant, details the evolution, natural history, and conservation of each of the cutthroat's races and incorporates more personal reflections on the ecology and environmental history of the West's river ecosystems. The bibliography now includes what may be the most comprehensive and complete set of references available

anywhere on the cutthroat trout. Written for anglers, nature lovers, environmentalists, and students, and featuring vibrant original illustrations by Joseph Tomelleri, this is an essential reference for anyone who wants to learn more about this remarkable, beautiful, and fragile western native.

## **They Sleep with the Fishes**

Vaughn L. Paragamian  
2016-01-11 Vaughn L. Paragamian was born January 1, 1945 in Kenosha, Wisconsin where he lived with his Italian grandparents for several years. He later moved a few miles north to Racine and when he was young spent many days with his Armenian Grandmother. Vaughn spent most of his free time on or near the Root River while growing up. In school he enjoyed athletic sports, fishing and hunting but not academics. He started working at age 14 for a farmer. After working in

factories several summers he was inspired to apply himself and has a BS from Iowa State University, and a MS from the University of Wisconsin Stevens Point. He is a veteran serving in the Army from 1969-1971. He spent 42 years as a fisheries scientist and has the nickname "The Godfather."

Vaughn retired from Idaho Fish and Game and is living with his wife Beth and dogs Daisy and Enrico near Coeur d' Alene, Idaho. He has three children Laura, Jon and Karin all married with five grandchildren.

*Idaho's Chinook Salmon* Deirdre A Abrams 2020-12-19  
Wild Chinook salmon, some migrating more than 900 miles to the ocean from the high mountains of Idaho, once made up nearly 50% of the Columbia

River Basin's salmon runs. In 2020, and over the last twenty years, wild Chinook in Idaho have been in crisis, placed on the endangered species list, and face the growing threat of extinction. In fact, only 2 % of Idaho's wild Chinook population remains. This is not only a crisis for this Idaho salmon but also for biodiversity in the Pacific Northwest. Snake River Chinook salmon are culturally important to many indigenous peoples and are the main source of food for the Southern Resident killer whales (orcas) of Puget Sound; therefore, the plight of Chinook salmon is adversely affecting native traditions and sustenance, and also the Southern Resident orcas, which are also on the endangered species list. Because Chinook salmon who originate in Idaho travel the farthest through the Columbia River Basin to the Pacific Ocean... and back... than any other Chinook population in the lower 48 states, the focus of this book is on them and their miraculous, obstacle-filled

migration. It is for the fish and young people that I write this book- in hopes of enlightening and inspiring kids all over the country, not just in Idaho, to learn how very special these brave salmon are and to join me in protecting them!

**Fishing Through the**

**Apocalypse** Matthew L. Miller

2019-03-01 What does the future hold for fish and the people who pursue them?

Fishing Through the Apocalypse explores that question through a series of fishing stories about the reality of the sport in the 21st century. Matthew Miller (director of science communications for The Nature Conservancy) explores fishing that might be considered dystopian: joining anglers as they stick their lines into trash-filled urban canals, or visiting farm ponds where you can catch giant, endangered fish for a fee. But it isn't all bleak. When it comes to fishing, the other part of the story is this: a cadre of anglers is looking to right past wrongs, to return native species, to remove dams, to appreciate the unappreciated fish, to clean our waters and protect public lands. As an angler and conservationist, Matt removes any and all preconceived notions about what it means to fish in the 21st century in order

to see the different visions of the future that exist right here, right now. Fishing Through the Apocalypse offers one of the widest-ranging looks at fish conservation in the United States, and also includes some of the more unusual adventures ever featured in a fishing book. Features fishing adventures in: Idaho Colorado Wyoming New Mexico Utah Texas Florida Iowa Minnesota Illinois Washington DC Virginia Pennsylvania

Philip R. Branigan 2016 Fish and microhabitat data were

collected at 542 locations in the Kootenai River, Idaho, during 2014 and 2015 to evaluate the effects of habitat rehabilitation on the fish assemblage. Samples were collected from locally-treated and locally-untreated areas of the river to investigate habitat conditions related to the occurrence and relative abundance of fishes. Fishes sampled from backwaters composed 71% of the overall catch and 84% of the catch from locally-untreated areas of the river. Assemblage-level ordinations and population-level regression models suggested that water depth and current velocity were the most important microhabitat variables influencing fish assemblage structure. Specifically, shallow habitats with low current velocities were important for native fishes and likely serve as rearing areas. These microhabitat conditions typically characterize backwater and channel-margin habitats that are vulnerable to anthropogenic perturbation.

Conserving these habitats in large, regulated rivers would enable natural channel forming processes for the benefit of native fishes.

A Fisherman's Guide to Selected Lakes of North Idaho

John E Moore 2017-01-16 The lakes selected for inclusion in this book are from Boundary, Bonner, Kootenai, Benewah and Shoshone counties of north Idaho. They range from lowland warm water lakes to alpine lakes. Many can be

driven to, while others require a hike. The book is separated into chapters for each lake. A photograph of the lake is included at the beginning of each chapter. Most fishing guides offer very limited information on a large number of lakes, most of which their authors have never been near. This book provides detailed information on the lake and surrounding area, as well as directions and fishing tips. All lakes included in this book have been personally visited, photographed, and in most cases fished by the author. The emphasis is on the fisherman's perspective, but camping and detailed trail information is equally applicable to those who only wish to hike and camp. The author is a ten-time Washington State record holder, with certified weight records for five different species of fish. Catch data for several hundred lakes, dating back to 1981, has been provided to Washington State fish biologists. Data dating back to 1994 has also been provided to the State of

Montana. Born and raised in northwest Washington and part of a very outdoor oriented family, the author has spent his entire life exploring new places and looking for new waters to fish. So far the search for fishing opportunities has ranged across the states of Washington, Idaho and Montana.
