Water Security for the 21st Century SIWI 2001-03-31 Selected Proceedings of the 10th Stockholm Water Symposium Organised by Stockholm International Water Institute (SIWI). The 10th Stockholm Water Symposium, "Water Security for the 21st Century - Innovative Approaches," examined how to cope with the creeping but predictive water-related problems due to population growth, urbanization and industrialization. The Symposium highlighted actions and appropriate innovative solutions in striving towards a transition from problem focus to opportunity focus, and it showed how to proceed to produce more with less water, and with less pollution loads. More than 900 leading experts discussed how key barriers - institutional as well as mental - can be overcome by increasing water awareness, literacy, solidarity and stewardship in society through innovative educational campaigns in an effort to make water everybody's business. Topics explored included innovative water-efficiency practices such as: irrigation with non-conventional water agriculture to minimize plant evaporation social and gender dimensions in water management integrated approaches to land use water resources socio-economic and ecological demands which impact on every community (large or small), and much more. The future-oriented, multi disciplinary Stockholm Water Symposia are convened annually by the Stockholm International Water Institute (SIWI), a scientific, technical and awareness-building organization that contributes to international efforts to combat the escalating global water crisis. SIWI facilitates research, raises understanding and stimulates action on world water issues.

Water as an Inescapable Risk Anja du Plessis 2018-12-15 The book presents an interdisciplinary systematic evaluation of increasing water stress and scarcity over the globe and specifically South Africa. South Africa is used as the prime example as the country is experiencing similar water challenges in terms of availability and quality as most regions across the globe. Water availability is predominantly used to illustrate water scarcity however, continued degradation of the world's freshwater resources, by a multitude of natural and anthropogenic factors, have consequently exacerbated water stress and scarcity due to it being of insufficient quality for various uses. The increase of water scarcity through both natural and anthropogenic factors has in turn led to water being viewed as an increasing risk within all spheres. Water as a source of conflict has come to the forefront especially within regions which struggle to meet the increasing demands from different water users and trying to achieve future sustainability of the resource. The increase of water scarcity and stress as well as the continued pressure of population and economic growth has brought various new challenges into play. This book focuses on water as an increasing risk over the globe and specifically South Africa by reviewing both water availability and quality, evaluating water as a global and national risk. The book concludes by focusing on current limitations, necessary strategic actions as well as possible policy-related changes which may be required to adapt to future water challenges and to lessen water as an increasing risk.

The Human Face of Water Security David Devlaeminck 2017-03-09 This volume collects essays from academics and practitioners from a diversity of areas and perspectives in order to discuss water security at various levels and to illuminate the central idea of water security: its focus on the individual. Beginning with the big picture, this book aims to illustrate the depth of the water security crisis and its interconnections

with other aspects of societal development. It particularly draws a connection to the 2030 Agenda for Sustainable Development, and discusses the challenges faced in meeting the 17 sustainability development goals (SDG) by the year 2030. Moving from international to domestic and community perspectives, this book provides a unique analysis of issues and solutions to the water issues we face today in light of the ever looming global changes brought on by climate change. Over the past few decades the recognition of our common need for water has increased, as policymakers have sought to place more focus on the individual within policy. After the recognition of water and sanitation as a fundamental human right by the United Nations General Assembly in 2010, there is increasing recognition of the individual as the building block for the struggle for water security. This reality also intersects with adverse impacts of global climate change, and the book responds to the broader question: will clean and safe water be available where we need it and when we need it in the future?

Adaptive and Integrated Water Management

Claudia Pahl-Wostl 2010-10-19 Sustainable water management is a key environmental challenge of the 21st century. This book presents the very latest studies, methods and innovations for managing our water resources from the first International Conference on Adaptive and Integrated Water Management, held in November 2007 in Basel, Switzerland. The book addresses a wide interdisciplinary audience of scientists and professionals from academia, industry, and those involved in policy making.

Gerard Magill 2019-02-11 This edited book is a collection of essays presented at the 3rd annual endowed conference held at Duquesne University, USA. The conference series addresses emerging concerns and threshold problems about the sustainability of our planet. The contributions gathered here highlight the inter-relation of topics and expertise from the perspectives of science and policy, religion and ethics, and pivotal global issues. The book concludes with an ethical analysis of the multiple and over-lapping challenges to paramount

concerns that require urgent attention and long-term resolution. The book is written for scholars and students in a variety of disciplines and fields that deal with the earth's current survival and future flourishing.

Innovative Technology in the Water, Sanitation and Hygiene (WASH) Sector Oksen, Peter 2020-05-05 Access to adequate water, sanitation and hygiene (WASH) embodies a fundamental human right recognized by the United Nations General Assembly. Technology often plays an important role by providing resource-efficient solutions to some of the challenges associated with WASH. This edition of the Global Challenges in Focus series explores the water supply aspect of WASH and highlights the role of technological innovation in relation to managing limited freshwater resources in situations of scarcity and/or threats to the quality of the water supply.

Water Resources Management Robert C. Brears

2024-04-01 Water resource management consists of planning, developing, distributing and managing the available water resources. With increasing population growth, urbanization, and climate change, water management becomes more demanding. This book presents innovative solutions for present as well as future challenges we are facing in water conservation and water quality protection. The 2nd Ed. entails new figures, percentages, latest information, trends, and all case studies updated with new ones. Provides a green perspective on how water is and can be used. The update will entail new figures, percentages, latest information, trends, and all case studies updated with new ones.

The Biopolitics of Water Sofie Hellberg

2018-03-28 Biopolitics refers to a form of politics

concerned with administering and regulating the conditions of life at an aggregated level of populations. This book provides a biopolitical perspective on water governance and its effects. It draws on the work of Foucault to explore how notions of scarcity are used in strategies of governance and how such governance differentiates between different populations. Furthermore, the author investigates what such biopolitical regulation means for people's lifestyles and the way they understand themselves and their moral responsibilities as humans, individuals and citizens. The book begins by investigating the global water agenda, with a particular emphasis on its focus on water for basic needs, and provides different examples of hydromentalities around the world. It also presents rich empirical details of one local case in South Africa. By carefully exploring the water 'stories' of water users, the book provides new perspectives on the relationship between water and power. Additionally, it offers an innovative methodological framework through which we can study the workings of governance more generally, and water governance specifically. It thereby contributes to the scholarship on water governance in relation to how water governance and technologies are part of producing subjectivities, notions of life and lifestyles and, more specifically, how the global water agenda can work so as to produce, or further entrench, distinctions between different lives and lifestyles. Ultimately, such differences between individuals and populations that are produced as an effect of water governance are assessed in relation to social sustainability.

The status of water use efficiency and productivity with a focus on paddy rice in Zambia Food and Agriculture Organization of the United Nations 2022-08-27 In view of the projected world water demand, increased water use efficiency in irrigation is crucial to sustainably increase agricultural productivity. Paddy field systems are especially water demanding, though products such as rice is not only a staple food, but also constitutes a major social and economic activity providing public goods and is a key source of employment and income for the rural population in Zambia. The Food and Agriculture Organization of the United Nations (FAO) has been active to increase the understanding of the status of water use efficiency and water productivity in Zambia through implementing the project "Efficient Agricultural Water Use and Management Enhancement in Paddy Fields", funded by the Japan Ministry of Agriculture, Forestry and Fisheries (MAFF). The project objective is to identify limits and potentials of paddy rice production at national level. The project findings presented in this report is a basis for assisting the country with the evaluation of the status of water use efficiency and water productivity of paddy fields, providing technical and policy support to enhance water resources management in Zambia. This report will help increasing the knowledge and building capacities of technical experts in relevant institutions, ministries and universities in Zambia. Its analysis of best practices will assist in determining the needs and existing gaps and what options are available to fill these gaps. Furthermore, the policy action matrix developed and the investment portfolio compiled will support the development of future financial plans in the country.

The Water Cycle Frances Purslow 2017-08-01

The constant movement of Earth's water is called the water cycle. A hydrologist is a scientist who studies water on and below Earth's surface, as well as in the atmosphere. Learn more in *The Water Cycle*, a Focus on Water Science book. In this series readers are introduced to the science behind Earth's water. A combination of vibrant photography and interesting text encourage readers to learn more

about water science.

Focus on Water Resource Research Eetu Heikkinen 2008 Water resources are defined as sources of water that are useful or potentially useful to humans. They are important because they are needed for life to exist. Many uses of water include agricultural, industrial, household, recreational and environmental activities.

Virtually all of these human uses require fresh water. Only 2.7 per cent of water on the Earth is fresh water, and over two thirds of this is frozen in glaciers and polar ice caps, leaving only 0.007 per cent available for human use. Fresh water is a renewable resource, yet the world's supply of clean, fresh water is steadily decreasing. Water demand already exceeds supply in many parts of the world, and as world population continues to rise at an unprecedented rate, many more areas are expected to experience this imbalance in the near future. The framework for allocating water resources to water users (where such a framework exists) is known as water rights. This new book presents the latest leading-edge research in the field.

Water Resilience for Human Prosperity Johan Rockström 2014-03-27 The world's human population now constitutes the largest driving force of changes to the biosphere. Emerging water challenges require new ideas for governance and management of water resources in the context of rapid global change. This book presents a new approach to water resources, addressing global sustainability and focusing on socio-ecological resilience to changes. Topics covered include the risks of unexpected change, human impacts and dependence on global water, the prospects for feeding the world's population by 2050, and a pathway for the future. The

book's innovative and integrated approach links green and blue freshwater with terrestrial and aquatic ecosystem functions and use. It also links changes arising from land-use alteration with the impacts of those changes on social-ecological systems and ecosystem services. This is an important, state-of-the-art resource for academic researchers and water resource professionals, and a key reference for graduate students studying water resource governance and management.

Water for Food Security, Nutrition and Social Justice Lyla Mehta 2019-09-19 This book is the first comprehensive effort to bring together Water, Food Security and Nutrition (FSN) in a way that goes beyond the traditional focus on irrigated agriculture. Apart from looking at the role of water and sanitation for human well-being, it proposes alternative and more locally appropriate ways to address complex water management and governance challenges from the local to global levels against a backdrop of growing uncertainties. The authors challenge mainstream supply-oriented and neo-Malthusian visions that argue for the need to increase the land area under irrigation in order to feed the world's growing population. Instead, they argue for a reframing of the debate concerning production processes, waste, food consumption and dietary patterns whilst proposing alternative strategies to improve water and land productivity, putting the interests of marginalized and disenfranchised groups upfront. The book highlights how accessing water for FSN can be challenging for small-holders, vulnerable and marginalized women and men, and how water allocation systems and reform processes can negatively affect local

people's informal rights. The book argues for the need to improve policy coherence across water, land and food and is original in making a case for strengthening the relationship between the human rights to water and food, especially for marginalized women and men. It will be of great interest to practitioners, students and researchers working on water and food issues. [Focus on Clean Water](#) United States.
