*Hard Landing* Algis Budrys 2016-02-02 A science fiction adventure told from the point of view of aliens who crash-land on Earth and must assimilate in secret—until their human cover is blown Budrys's final novel opens with the report of a man found electrocuted on suburban train tracks in Shoreview, Illinois. Neville Sealman appeared to be just another commuter, but after his tragic death, no one comes forward to claim his body. And a routine autopsy reveals some disturbing physiological anomalies. Then a spaceship is unearthed in a New Jersey swamp. It's the stuff of tabloids—except it's all true. Years earlier, a starship crash-landed on Earth. Its passengers, human in appearance, were forced to make their separate ways in an alien world. No one knows that these otherworldly visitors have been living among the human race—but now their cover could be blown. Told in the form of an investigation reconstructed through direct and indirect witness testimony, *Hard Landing* takes the reader into the minds of its four protagonists as they struggle with the far-reaching ramifications of discovery. This is a suspenseful and revelatory novel about the elusive, ever-changing nature of identity.

**Return to Earth** Buzz Aldrin 2015-12-15 Apollo 11 astronaut Buzz Aldrin's courageous, candid memoir of his return to Earth after the historic moon landing and his personal struggle with fame and depression. "We landed with all the grace of a freight elevator," Buzz Aldrin relates in the opening passages of *Return to Earth*, remembering Command Module Columbia's abrupt descent into the gravity of the blue planet. With that splash, Aldrin takes readers on a journey through the human side of the space program, as one of the first two men to land on the moon learns to cope with the pressures of his new public persona. In honest and compelling prose, Aldrin reveals a side of instant fame for which West Point and NASA could never have prepared him. One day a fighter pilot and engineer, the next a cultural hero burdened with the adoration of thousands, Aldrin gives a poignant account of the affair that threatened his marriage, as well as his descent into alcoholism and depression that resulted from trying to be too many things to too many people. He didn't realize that when he landed on his home planet his odyssey had just begun. As Aldrin puts it, "I traveled to the moon, but the most significant voyage of my life began when I returned from where no man had been before." *Return to Earth* is a powerful and moving memoir that exposes the stresses suffered by those in the Apollo program and the price Buzz Aldrin paid when he became an American icon.

**Space Forces** Fred Scharmen 2021-11-02 The radical history of space exploration from the Russian Cosmists to Elon Musk Many societies have imagined going to live in space. What they want to do once they get up there - whether conquering the unknown, establishing space "colonies," privatising the moon's resources - reveals more than expected. In this fascinating radical history of space exploration, Fred Scharmen shows that often science and fiction have combined in the imagined dreams of life in outer space, but these visions have real implications for life back on earth. For the Russian Cosmists of the 1890s space was a place to pursue human perfection away from the Earth. For others, such as Wernher Von Braun, it was an engineering task that combined, in the Space Race, the Cold War, and during World War II, with destructive geopolitics. Arthur C. Clark in his speculative books offered an alternative vision of wonder that is indifferent to human interaction. Meanwhile NASA planned and managed the space station like an earthbound corporation. Today, the market has arrived into outer space and exploration is the plaything of superrich technology billionaires, who plan to privatise the mineral wealth for themselves. Are other worlds really possible? Bringing these figures and ideas together reveals a completely different story of our

relationship with outer space, as well as the dangers of our current direction of extractive capitalism and colonisation.

**The Apollo 11 Moon Landing** Sylvia Engdahl 2011-07-22 Since humankind first set eyes on the glowing orb in the night sky, we have been fascinated by the moon. This handy volume gives readers a background on the Apollo 11 Moon Landing, through a variety of essays representing various perspectives. Readers are then introduced to several controversies surrounding the landing, including whether it was a waste of effort, enthusiasm, or money. From this enriched international understanding, readers are then treated to first-hand accounts, which will transport their imagination back through time, and allow them to form lasting, intelligent opinions. Essay sources include the Associated Press, the London Times, Margaret Mead, Jean-Jacques Dordain, and NASA.

**An Introduction to Space Weather** Mark Moldwin 2022-12-01 Our space age technology enables global communication, navigation, and power distribution that has given rise to our 'smart', interconnected and spacefaring world. Much of the infrastructure modern society depends on, to live on Earth and to explore space, is susceptible to space weather storms originating from the Sun. The Second Edition of this introductory textbook is expanded to reflect our increased understanding from more than a dozen scientific missions over the past decade. Updates include discussions of the rapidly expanding commercial space sector, orbital debris and collision hazards, our understanding of solar-terrestrial connections to climate, and the renewed emphasis of human exploration of the Moon and Mars. It provides new learning features to help students understand the science and solve meaningful problems, including some based on real-world data. Each chapter includes learning objectives and supplements that provide descriptions of the science and learning strategies to help students and instructors alike.

**Landing Characteristics of a Reentry Capsule with a Torus-shaped Air Bag for Load Alleviation**

John R. McGehee 1960 An experimental investigation has been made to determine the landing characteristics of a conical-shaped reentry capsule by using torus-shaped air bags for impact alleviation. An impact bag was attached below the large end of the capsule to absorb initial impact loads and a second bag was attached around the canister to absorb loads resulting from impact on the canister when the capsule overturned. A 1/6-scale dynamic model of the configuration was tested for nominal flight paths of 600 and 900 (vertical), a range of contact attitudes from -250 to 300, and a vertical contact velocity of 12.25 feet per second. Accelerations were measured along the X-axis (roll) and Z-axis (yaw) by accelerometers rigidly installed at the center of gravity of the model. Actual flight paths, contact attitudes, and motions were determined from high-speed motion pictures. Landings were made on concrete and on water.

**The Case for Mars** Robert Zubrin 2011-06-28 He explains step-by-step how we can use present-day technology to send humans to Mars within ten years; actually produce fuel and oxygen on the planet's surface with Martian natural resources; how we can build bases and settlements; and how we can one day "terraform" Mars - a process that can alter the atmosphere of planets and pave the way for sustainable life. "Under Dr. Zubrin's program, a human mission is only the first step toward a day when research bases and eventual colonies can be developed on Mars' surface. Mars possesses enormous chemical and mineral resources, all of which can be put to use in pursuit of travel, exploration, structures, and a variety of human activities on a planet that is neither as harsh nor as unreachable as we popularly believe." "The Case For Mars is not a vision for the far future or one that will cost us impossible billions. It is a plan that can be put

into action today if we are willing to rethink our traditional methods and costs.

Guyton and Hall Textbook of Medical Physiology E-Book John E. Hall 2015-05-31 The 13th edition of Guyton and Hall Textbook of Medical Physiology continues this bestselling title's long tradition as the world's foremost medical physiology textbook. Unlike other textbooks on this topic, this clear and comprehensive guide has a consistent, single-author voice and focuses on the content most relevant to clinical and pre-clinical students. The detailed but lucid text is complemented by didactic illustrations that summarize key concepts in physiology and pathophysiology. Emphasizes core information around how the body must maintain homeostasis in order to remain healthy, while supporting information and examples are detailed. Summary figures and tables help quickly convey key processes covered in the text. Reflects the latest advances in molecular biology and cardiovascular, neurophysiology and gastrointestinal topics. Bold full-color drawings and diagrams. Short, easy-to-read, masterfully edited chapters and a user-friendly full-color design. Clinical vignettes throughout the text all you to see core concepts applied to real-life situations. Brand-new quick-reference chart of normal lab values on the inside back cover. Increased number of figures, clinical correlations, and cellular and molecular mechanisms important for clinical medicine. Student Consult eBook version included with purchase. This enhanced eBook experience includes the complete text, interactive figures, references, plus 50 self-assessment questions and more than a dozen animations.

Monte Carlo Approach to Touchdown Dynamics for Soft Lunar Landing Robert E. Lavender 1965 Results of analytical touchdown dynamics investigations are presented which were conducted to obtain estimates of the probability of stable landing for configurations with various landing gear diameters. Both three-legged and four-legged vehicles are considered in the analysis. Dynamic scaling considerations are taken into account so that the results are applicable to a wide range of vehicle size and mass. A Monte Carlo approach is taken in the determination of initial landing conditions. Results indicate that for a given probability of stable landing, a three-legged vehicle requires a landing gear diameter only slightly larger than the diameter required for a four-legged vehicle. Therefore the three-legged vehicle's landing gear should weigh less.

*The Moon Landing* Nigel Kelly 2006 Learn how the Moon landing changed the way we see the world. This book focuses on the first Moon landing, analyzing how it came about, describing it, and discussing its consequences on history. Investigate the timeline to understand crucial dates surrounding this event. Read the debate section so you can consider the arguments and weigh the evidence about its role in history. Clear photographs, maps, contemporary views, a glossary, and tips for future research are included to help you to understand the importance of this turning point in history.

men journeyed from Earth to the Moon. This fascinating book traces what was a massive accomplishment right from the early launches through manned orbital spaceflights, detailing each step. Out of the battlefields of World War II came the gifted German engineers and designers who developed the V-2 rocket, which evolved into the powerful Saturn V booster that propelled men to the Moon. David Woods tells this exciting story, starting from America's postwar astronautical research facilities. The techniques and procedures developed have been recognised as an example of human exploration at its greatest, demonstrating a peak of technological excellence.
