Insecticide Biochemistry and Physiology Wilkinson 2013-11-11 Only four short decades ago, the control of insect pests by means of chemicals was in its early infancy. The pioneers in the area consisted largely of a group of dedicated applied entomologists working to the best of their abilities with a very limited arsenal of chemicals that included inorganics (arsenicals, fluorides, etc.), some botanicals (nicotine), and a few synthetic organics (dinitro-o-cresol, organothiocyanates). Much of the early research was devoted to solving practical problems associated with the formulation and application of the few existing materials, and although the discovery of new types of insecticidal chemicals was undoubtedly a pipe dream in the minds of some, little or no basic research effort was expended in this direction. The discovery of the insecticidal properties of DDT by Paul Müller in 1939 has to be viewed as the event which marked the birth of modern insecticide chemistry and which has served as the cornerstone for its subsequent development. DDT clearly demonstrated for the first time the dramatic potential of synthetic organic chemicals for insect control and provided the initial stimulus which has caused insecticide chemistry to become a field not only of immense agricultural and public health importance but also one that has had remarkable and unforeseeable repercussions in broad areas of the physical, biological, and social sciences. Indeed, there can be few other synthetic chemicals which will be judged in history to have had such a broad and telling impact on mankind as has DDT.

Biological Basis of Detoxication John Caldwell 2012-12-02 Biological Basis of Detoxication focuses on the biological processes involved in detoxication, with emphasis on the biochemistry of the removal of xenobiotics from an organism. Topics range from the formation of toxic metabolites and compounds that are not metabolized at all to the tissue

distribution and nutritional considerations, the kinetics and mechanisms of the metabolic and excretory processes, and the integration of xenobiotic metabolism in the activation and detoxication of carcinogens. Organized into 14 chapters, this book begins with an overview of the enzymatic basis for the metabolic activation of foreign compounds in forming reactive chemical intermediates. The first few chapters discuss the identification of reactive electrophiles derived from xenobiotics, intratissue distribution of activating and detoxicating enzymes, enzymatic and non-enzymatic modes of xenobiotic metabolism, and unmetabolized compounds. The middle chapters explore the biological basis of detoxication of oxygen free radicals, physiologic and kinetic aspects of the fate of xenobiotics, excretion of xenobiotics, and effects of nutrition on detoxication. The remaining chapters look at the relationships between the enzymes of detoxication and host defense mechanisms, metabolic basis of target organ toxicity, the enzymatic factor in selective toxicity, and intraindividual and interindividual variations in rates of hepatic metabolism of exogenous chemicals. Pharmacologists, toxicologists, and biochemists will find this book highly informative.

Indirect Food Additives and Polymers Victor O. Sheftel 2000-03-30 Now, more than ever, foods come packaged in containers designed for direct cooking or heating, which often causes the movement of substances - indirect additives - into foods. Because of their unique characteristics, plastics or polymeric materials (PM) have become the most important packaging material for food products. The safety assessment of plastics intended for use in contact with foodstuffs or drinking water continues to present a serious challenge. *Indirect Food Additives and Polymers: Migration and Toxicology* studies the potential hazards of indirect additives for human health and develops recommendations for their safe manufacture and use. It contains an impressive review of basic regulatory, toxicological, and other scientific information necessary to identify, characterize, measure, and predict the hazards of nearly 2,000 plastic-like materials employed in packaging. The author presents the data underlying federal regulations - previously unavailable a single volume. The entry for each chemical provides: Prime Name Molecular or Structural Formula Molecular Mass Synonyms CAS Number RTECS number Properties Application and Exposure Migration Data Acute Toxicity Repeated Exposure Short-Term Toxicity Long-Term Toxicity Immunotoxicity of Allergenic Effect Reproductive Toxicity Mutagenicity

Carcinogenicity Chemobiokinetics Standards Guidelines Regulations Recommendations References International in scope, the Handbook of Indirect Polymeric Additives in Food and Water: Migration and Toxicology offers comprehensive data on the toxic effects of polymeric materials and their ingredients. You will find the most information on plastics and polymeric materials- their migration and toxicology - in this resource.

Handbook of Mammalian Metabolism of Plant Compounds Ronald R. Scheline 1991-02-26 Handbook of Mammalian Metabolism of Plant Compounds provides an extensive survey of how mammals metabolize compounds found in higher plants. Information about these compounds is important to researchers in pharmacology, toxicology, medical and natural products chemistry, and food sciences. Although there is plenty of literature about mammalian metabolism of plant compounds, it is scattered, and summaries of specific plant compounds are often difficult to obtain. This book contains 11 chapters discussing the metabolic fate of individual plant compounds grouped according to chemical class. It also features structural formulas of the compounds and their metabolites, including probable pathways of metabolism. This book provides a convenient single-volume reference source that will benefit all researchers requiring this type of information.

Metabolic Basis of Detoxication William B. Jakoby 2012-12-02

Metabolic Basis of Detoxication: Metabolism of Functional Groups considers the possible fates of the relatively circumscribed number of functional groups that xenobiotics bear. An understanding of the possible reactions, and the chemical and biological factors influencing them, will contribute to the overall predictability of the fate of "real" molecules. This approach attempts to knit together the understanding of metabolic pathways with that of the enzymes that catalyze the specific steps. The book contains 18 chapters and begins with a discussion of the biological oxidation of carbon atoms. This is followed by separate chapters on the metabolism of halogenated aliphatic hydrocarbons, aryl halides, heterocyclic rings, alcohols, aldehydes, and ketones. Subsequent chapters cover oxidative processes such as metabolic dealkylations and

biological oxidation at nitrogen centers; the reduction of nitro and azo compounds and tertiary amine N-oxides; the oxidation, alkylation, acylation, and glycosylation of mercaptans; epoxide metabolism; and conjugation of phenols. The book aims to inform and interest the pharmacologist and toxicologist concerning the biochemical aspects and to orient the biochemist to the pharmacological insights required in dealing with the metabolism of xenobiotics.

Enzymatic Basis of Detoxication Volume 2 William B. Jakoby 1980-10-28 Enzymatic Basis of Detoxication, Volume II, reviews the state

of knowledge on foreign compound metabolism at the level of what specific enzymes can do. The book attempts to provide a holistic view of the information gleaned from work with specific, purified enzymes encompassing as many mammalian sources as have been studied. The book is organized into two parts. Part I on conjugation reactions and related systems includes studies on the properties of glucuronide formation; the physiological function, assay, and purification of function of bilirubin-glucuronoside glucuronosyltransferase; the roles of N- and O-methylation reactions and glutathione transferases in detoxication; and amino acid conjugation. Part II presents studies on hydrolytic systems, covering the role of epoxide hydrolase, carboxylesterases, and amidases in detoxication and the regulatory effects of these enzymes. This book provides pharmacologists and toxicologists with the biochemical view of detoxication, and biochemists with the corresponding pharmacological and toxicological aspects.

IRIS Chemical Information Database Lawrence H. Keith 1992-09-29
The Integrated Risk Information System (IRIS) is the EPA's most comprehensive database for hazardous environmental chemicals. Updated quarterly, it covers five major subject categories: Chronic health hazard assessment for noncarcinogenic effects Carcinogenicity assessment for lifetime exposure Health hazard assessments for varied exposure durations U.S. EPA regulatory actions Supplementary data, references, and synonyms IRIS (Integrated Risk Information System) Features: Our version of the IRIS database is available at a significant savings over the government's version and features powerful searching capabilities, printing and exporting features, and automatic installation... Data for this package is compiled into a series of alphabetized searchable files that comes complete with a menu-driven search program to make finding information quick and painless. The database also features an automatic installation program and can generate reports as printed copies or electronic files ready for import into a word processor. Load as much or as little of the information you need from the database for fast results on your personal computer. When your IRIS quarterly updates arrive, simply load the new disks on your computer and the latest version

of the complete IRIS database is at your fingertips. Even better, our version of the IRIS database is available at a significant savings over the government's version, and features powerful searching capabilities, printing and exporting features, and automatic installation. The most comprehensive data available for hazardous substances... IRIS (Integrated Risk Information System) features comprehensive information for about 500 hazardous regulated and unregulated substances. This number increases every three months with the addition of new files and revisions to existing information. Unlike other databases that provide summaries or abbreviated data, IRIS gives you extensive textual and numeric information complete with EPA contacts and full references. IRIS is the database to use to obtain the critical toxicity, regulatory, risk assessment, medical, chemical and physical property data you'll need for risk evaluations, regulatory decisions, and other uses. And with its quarterly updates, your information never grows old. Chronic health hazard assessments include reference doses for chronic oral exposure and inhalation exposure. Carcinogenicity assessment data includes evidence for classification as to human carcinogenicity; quantitative estimates of carcinogenic risk from oral exposure and inhalation exposure; and EPA documentation, review, and contacts. Health hazards assessments provide information from EPA's Drinking Water Health Advisories (including health advisories for children and adults, organoleptic properties, taste and odor, analytical methods for detection in drinking water, water treatment, documentation and EPA contacts). What Does IRIS Provide? Complete U.S. EPA regulatory action data is presented for: Clean Air Act (including NAAQS, NESHAP, and NSPS) Safe Drinking Water Act (including MCLGs, MCLs, and SMCLs) Clean Water Act Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) Toxic Substances Control Act (TSCA) Resource Conservation and Recovery Act (RCRA) (including Appendix 9) Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) (including Superfund data) Reportable quantity data for the release of substances into the environment IRIS's supplementary data includes important information such as: Acute health hazard information (e.g.,

toxicity, medical conditions) Physical and chemical properties (e.g., formula, vapor pressure, flash point) References and synonyms IRIS Chemical Information Database is one of the most important reference sources available for toxicologists, chemists, chemical engineers, ecologists, environmental scientists, regulators, industrial hygienists, occupational physicians, government administrators, emergency response personnel, hazardous material response teams, lawyers, union representatives, insurance companies, commercial realtors and lending institutions, property pre-acquisition auditors, analytical laboratories, and libraries. System Requirements: To use the IRIS Chemical Information Database, you need IBM® or IBM-compatible equipment with 640K RAM and a hard drive with 2 to 15MB of available disk space (depending on the number of disks you load). DOS 2.0 or higher is also required. Diskettes can be ordered in either 5.25" or 3.5" formats. The IRIS Chemical Information Database is an annual subscription product updated on a quarterly basis. A user's manual is included in the subscription price. Each update will be automatically sent to you unless you cancel your subscription. Because each update replaces the previous version of the IRIS database, you can be sure that you will receive the most current version, including searching, printing, and installation capabilities, regardless of what time of year you initially subscribe. Subscription renewal information for 1993 will automatically be sent to current subscribers.

Residue Reviews Francis A. Gunther 2012-12-06 Worldwide concern in scientific, industrial, and governmental communities over traces of toxic chemicals in foodstuffs and in both abiotic and biotic environments has justified the present biumvirate of specialized publications in this field: comprehensive reviews, rapidly published progress reports, and archival documentations. These three publications are integrated and scheduled to provide in international communication the coherency essential for nonduplicative and current progress in a field as dynamic and complex as environmental contamination and toxicology. Until now there has been no journal or other publication series reserved exclusively for the diversified literature on "toxic" chemicals in our foods, our feeds, our geographical surroundings, our domestic animals, our wild life, and ourselves. Around the world immense efforts and many talents have been mobilized to technical and other evaluations of natures, locales, magnitudes, fates, and toxicology of the persisting residues of these chemicals loosed upon the world. Among the sequelae of this broad new

emphasis has been an inescapable need for an articulated set of authoritative publications where one could expect to find the latest important world literature produced by this emerging area of science together with documentation of pertinent ancillary legislation.
