Automotive Fuel and Emission
Control Systems, Third Edition,
is designed specifically to

correlate with the NATEF
program. This comprehensive,
up-to-date text covers all
aspects of automotive fuel and
emissions. It emphasizes
diagnosis and troubleshooting,
and features tech tips and
diagnostic stories throughout.
This title meets the needs for a
textbook that combines topics
in engine performance (ASE A8
content area) and topics
covered in the advanced engine
performance (L1) ASE test
content area. By combining
these two complementary
subjects into one
comprehensive textbook, it is
easier for the instructor to
teach these topics and is cost
effective for the student.

Cleaner Cars J Robert Mondt 2000-01-28 This book chronicles a 35-year success story - the technology that was developed and the progress that was made to achieve the goal of reducing air pollution from automobiles. "Air pollution from automobiles as of the year 2000 will have been lowered to levels less than 5% of those for pre-control era vehicles," writes author J. Robert Mondt, who spent over 30 years working on the development of emission control systems for automobiles. Mondt covers both the technological and political aspects of this effort, from the early environmental concerns in California to the Clean Air Acts of the 1960s to the introduction of catalytic converters in 1975. He also covers the revised Clean Air Acts of the 1960s to the introduction of catalytic converters in 1975.

Evaluating Vehicle Emissions Inspection and Maintenance Programs National Research Council 2001-12-16 Emissions inspection and maintenance (I/M) programs subject vehicles to periodic inspections of their

emission control systems.

Despite widespread use of these programs in air-quality management, policy makers and the public have found a number of problems associated with them. Prominent among these issues is the perception that emissions benefits and other impacts of I/M programs have not been evaluated adequately. Evaluating Vehicle Emissions Inspection and Maintenance Programs assesses the effectiveness of these programs for reducing mobile source emissions. In this report, the committee evaluates the differences in the characteristics of motor vehicle emissions in areas with and without I/M programs, identifies criteria and methodologies for their evaluation, and recommends improvements to the programs. Most useful of all, this book will help summarize the observed benefits of these programs and how they can be redirected in the future to increase their effectiveness.
