The Book of Shells M. G. Harasewych 2014-12-10 Who among us hasn't marveled at the diversity and beauty of shells? Or picked one up, held it to our ear, and then gazed in wonder at its shape and hue? Many a

lifelong shell collector has cut teeth (and toes) on the beaches of the Jersey Shore, the Outer Banks, or the coasts of Sanibel Island. Some have even dived to the depths of the ocean. But most of us are not familiar with the biological origin of shells, their role in explaining evolutionary history, and the incredible variety of forms in which they come. Shells are the external skeletons of mollusks, an ancient and diverse phylum of invertebrates that are in the earliest fossil record of multicellular life over 500 million years ago. There are over 100,000 kinds of recorded mollusks, and some estimate that there are over a million more that have yet to be discovered. Some breathe air, others live in fresh water, but most live in the ocean. They range in size from a grain of sand to a beach ball and in weight from a few grams to several hundred pounds. And in this lavishly illustrated volume, they finally get their full due. The Book of Shells offers a visually stunning and scientifically engaging guide to six hundred of the most intriguing mollusk shells, each chosen to convey the range of shapes and sizes that occur across a range of species. Each shell is reproduced here at its actual size, in full color, and is accompanied by an explanation of the shell's range, distribution, abundance, habitat, and operculum—the piece that protects the mollusk when it's in the shell. Brief scientific and historical accounts of each shell and related species include fun-filled facts and anecdotes that broaden its portrait. The Matchless Cone, for instance, or *Conus cedonulli*, was one of the rarest shells collected during the eighteenth century. So much so, in fact, that a specimen in 1796 was sold for more than six times as much as a painting by Vermeer at the same auction. But since the advent of scuba diving, this shell has become far more accessible to collectors—though not without certain risks. Some species of *Conus* produce venom that has caused more than thirty known human deaths. The Zebra Nerite, the Heart Cockle, the Indian Babylon, the Junonia, the Atlantic Thorny Oyster—shells from habitats spanning the poles and the tropics, from the highest mountains to the ocean's deepest recesses, are all on display in this definitive work. Spirals in Time Helen Scales 2015-05-07 The beautifully written story of shells and their makers, and our relationships with them. Seashells are the sculpted homes of a remarkable group of animals: the molluscs. These are some of the most ancient and successful animals on the planet. But watch out. Some molluscs can kill you if you eat them. Some will kill you if you stand too close. That hasn't stopped people using shells in many ways over thousands of years. They became the first jewelry and oldest currencies; they've been used as potent symbols of sex and death, prestige and war, not to mention a nutritious (and tasty) source of food. *Spirals in Time* is an exuberant aquatic romp, revealing amazing tales of these undersea marvels. Helen Scales leads us on a journey into their realm, as she goes in search of everything from snails that 'fly' underwater on tiny wings to octopuses accused of stealing shells and giant mussels with golden beards that were supposedly the source of Jason's golden fleece, and learns how shells have been exchanged for human lives, tapped for mind-bending drugs and inspired advances in medical technology. Weaving through these stories are the remarkable animals that build them, creatures with fascinating tales to tell, a myriad of spiralling shells following just a few simple rules of mathematics and evolution. Shells are also bellwethers of our impact on the natural world. Some species have been overfished, others poisoned by polluted seas; perhaps most worryingly of all, molluscs are expected to fall victim to ocean acidification, a side-effect of climate change that may soon cause shells to simply melt away. But rather than dwelling on what we risk losing, *Spirals in Time* urges you to ponder how seashells can reconnect us with nature, and heal the rift between ourselves and the living world.

Cynthia Barnett 2021-07-06 A Science Friday Best Science Book of the Year A Kirkus Reviews Best Nonfiction Book of the Year A Library Journal Best Science and Technology Book of the Year A Tampa Bay Times Best Book of the Year A stunning history of seashells and the animals that make them that "will have you marveling at nature...Barnett's account remarkably spirals out, appropriately, to become a much larger story about the sea, about global history and about environmental crises and preservation" (John Williams, New York Times Book Review). Seashells have been the most coveted and collected of nature's creations since the dawn of humanity. They were money

before coins, jewelry before gems, art before canvas. In *The Sound of the Sea*, acclaimed environmental author Cynthia Barnett blends cultural history and science to trace our long love affair with seashells and the hidden lives of the mollusks that make them. Spiraling out from the great cities of shell that once rose in North America to the warming waters of the Maldives and the slave castles of Ghana, Barnett has created an unforgettable history of our world through an examination of the unassuming seashell. She begins with their childhood wonder, unwinds surprising histories like the origin of Shell Oil as a family business importing exotic shells, and charts what shells and the soft animals that build them are telling scientists about our warming, acidifying seas. From the eerie calls of early shell trumpets to the evolutionary miracle of spines and spires and the modern science of carbon capture inspired by shell, Barnett circles to her central point of listening to nature's wisdom—and acting on what seashells have to say about taking care of each other and our world.

Walking on Cowrie Shells Nana Nkweti 2021-06-01 A “boisterous and high-spirited debut” (Kirkus starred review) “that enthalls the reader through their every twist and turn” (Publishers Weekly starred review), named one of the Most Anticipated Books for Brittle Paper, *The Millions*, and *The Rumpus*, penned by a finalist for the AKO Caine Prize. In her powerful, genre-bending debut story collection, Nana Nkweti's virtuosity is on full display as she mixes deft realism with clever inversions of genre. In the Caine Prize finalist story “It Takes a Village, Some Say,” Nkweti skewers racial prejudice and the practice of international adoption, delivering a sly tale about a teenage girl who leverages her adoptive parents to fast-track her fortunes. In “The Devil Is a Liar,” a pregnant pastor's wife struggles with the collision of western Christianity and her mother's traditional Cameroonian belief system as she worries about her unborn child. In other stories, Nkweti vaults past realism, upending genre expectations in a satirical romp about a jaded PR professional trying to spin a zombie outbreak in West Africa, and in a mermaid tale about a Mami Wata who forgoes her power by remaining faithful to a fisherman she loves.

Seashells of North Carolina Hugh J. Porter 1998-05 For many people, seashells are just part of the beach scenery--thousands of pretty but

nameless objects strewn along the shore. Other people know the names of shells but often wonder how they were formed and what type of animal lived inside. Such incidental knowledge may not seem important, but it can encourage people to observe their environment more closely and to gain a better understanding of it. As a result, they may become better fishers, more informed teachers or more conscientious stewards of our coast. To this end, the seashell guide was produced. Many collectors get started when they find an intriguing shell, perhaps after a storm, and search for it in a guide. Others, by chance, meet an experienced sheller on the beach. Talking with a collector passionate about shells is likely to spark an interest in anyone who has spent time at the coast. A walk down the beach is never the same once you begin to recognize a few shells. Gradually, you learn to use certain marks to solve the puzzle of shell identification. The walk becomes more satisfying as you recognize familiar shells like old friends, and it becomes more exciting as you look for new ones.
