

Green Households Domestic Consumers The Environment And Sustainability

Sustainable Production Consumption Systems

Louis Lebel 2009-12-02 Sustainable Production Consumption Systems brings together a set of designed case studies intended to provide a more in-depth understanding of challenges and opportunities in bringing knowledge and actions closer together for the sustainable management of specific production and consumption systems. The case study approach enabled researchers to engage directly with some of the actors involved in the production, consumption or regulation of specific goods or services and other stakeholders affected by those processes. Such engagement was particularly worthwhile when it helped mobilize actors to pursue linking knowledge with action in ways that improve the

prospects for sustainability.

Sustainable Consumption, Ecology and Fair Trade

Edwin Zaccà 2007-01-30 This timely volume discusses the debates concerning sustainable consumption and the environment. Sustainable consumption stands as a wide objective that attracts a growing attention within sustainable development policy circles and academic research. The contributors examine a range of interesting and relevant case studies including: household energy consumption, sustainable welfare, Fair Trade, Oxfam Worldshops, cotton farming and consumer organizations. Sustainable Consumption takes an interdisciplinary approach and is well-balanced, presenting theoretical debates as well as empirical evidence in order to: characterize

the basic problems and determiners of an evolution towards, and the obstacles to, more sustainable consumption patterns produce knowledge on the profile of consumers sensitive, and not sensitive, to these issues explore realistic modes of interaction and innovation for changes in which consumers are involved. This text will be of interest to students and scholars of politics, environment studies and sociology.

Environmental Sustainability in Emerging

Markets Ninh Nguyen 2022-05-19 Increasing evidence of environmental deterioration in emerging markets, climate change, and consequences of environmental waste have compelled not only businesses but also consumers to reduce the environmental burden, mitigate waste and preserve resources for future generations. What actions, strategies, practices, and policies can be developed to sustain environmental sustainability in emerging markets? This book brings together fresh insights, ideas, and new research directions.

This book consists of eleven chapters which examine environmental sustainability from consumer, organisation and policy perspectives. These chapters are contributed by emerging and eminent authors from different regions of the world including Asia, Australia, Europe, North America, and South America. This book provides an insightful and valuable compendium for sustainability researchers, businesses, educators, and policymakers, and readers concerned about socio-environmental issues and sustainable development. Greener Products Al Iannuzzi 2016-04-19 As

the global demand for natural and organic products continues to grow, making and marketing greener products is becoming an imperative. The old stereotype of green products' sub-par performance has been shattered as large multinational corporations prove that you can develop and win in the marketplace with a naturals-based product platform. And the pull for sustainably minded products is not limited to consumer marketing—business-to-business marketing of greener products has also increased due to customer demand from all business sectors. The Case for Greener Products Making a compelling business case for why companies must provide greener, more sustainable products, Greener Products: The Making and Marketing of Sustainable Brands shares best practices for the design and marketing of greener products. The book examines ecosystem and regulatory pressures as well as market pressures from customers—consumers, business customers, and

government purchasers—who have created a demand on manufacturers to bring more sustainable brands to market. How Are Greener Products Made? Through case studies of green design from companies such as GE (Ecomagination™), Timberland (Green Index®), Philips, Apple Inc., Seventh Generation, Procter & Gamble, BASF, and others, the author explores initiatives in areas ranging from product design, sustainable sourcing, and packaging to energy efficiency, recycling, and end-of-life management. A contribution from guest author James A. Fava, one of the leading thinkers and practitioners in developing greener products, presents a toolbox of environmental management systems, programs, and tools for the development of greener products. Three Keys to Successful Green Marketing Campaigns Providing the backbone for the author's analysis of green marketing, a contribution from guest authors Lee Ann Head, Karen Barnes, and Suzanne

Shelton of the Shelton Group analyzes market trend data and helps marketers understand their customers and what moves them. The author then looks more closely at drivers for green marketing, outlining three keys for successful green marketing campaigns and using them to evaluate the approaches of several leading companies. He also offers advice on how to avoid "greenwashing," create successful cause-marketing partnerships, and use eco-labels wisely. Throughout the book, the author shares best practices and lessons learned from leaders in the field across various industry sectors. Written by the senior director of product stewardship for Johnson & Johnson, this timely book offers real-world experience, valuable insights, and practical tools for the effective design and marketing of greener products. The Best Days of Green Marketing Are Still Ahead See what Al Iannuzzi has to say about making and marketing greener products in an interview at Greenbiz.com.

The Consumer's Guide to Effective Environmental Choices Michael Brower
2009-11-04 From one of the most prestigious nonprofit organizations devoted to environmental issues comes a clear, practical, and rational overview of the relationship between consumers and the environment. Paper or plastic? Bus or car? Old house or new? Cloth diapers or disposables? Some choices have a huge impact on the environment; others are of negligible importance. To those of us who care about our quality of life and what is happening to the earth, this is a vastly important issue. In these pages, the Union of Concerned Scientists help inform consumers about everyday decisions that significantly affect the environment. For example, a few major decisions--such as the choice of a house or vehicle--have such a disproportionately large affect on the environment that minor environmental infractions shrink by comparison. This book identifies the 4 Most Significant Consumer-

Related Environmental Problems, the 7 Most Damaging Spending Categories, 11 Priority Actions, and 7 Rules for Responsible Consumption. Learn what you can do to have a truly significant impact on our world from the people who are at the forefront of scientific research.

Sustainable Energy Consumption and Society David L. Goldblatt 2007-07-18 This multidisciplinary study combines social science, energy analysis, and risk communication, using theory, research, and computer-aided interviews to illustrate the range and relative effectiveness of interventions that support sustainable energy consumption. Based on award-winning research at the Swiss Federal Institute of Technology, the book combines analytical modeling techniques

with social science on sustainable consumption. *Green Consumption in China* Jin Min 2023-09-06 Based on theories discussion, policy analysis, and case studies, this title examines green consumption in China from both the macro level of policy evolution and the micro level of community participation and implementation. Drawing on the theories of sustainable development, ecological philosophy, environmental economics, consumer psychology and behavior, and community participation, this book approaches the issues of green consumption in China from the legislative and administrative aspects and economic and information means. In looking into the cases of Shenzhen and Beijing, the book unravels the implementation and development of green consumption at the community level in terms of community participation and people's awareness of the issue. Combining global experiences and local empirical studies, it discusses the concepts, evolution, and influencing factors of green

consumption. It focuses on China's policy and practice, as well as the institutional hindrance and policy suggestions for further progress. This book will appeal to researchers, professionals, and policymakers interested in sustainable development, green economy, environmental economics, and sustainable consumption policy in China.

Domestic Environmental Labour Carol Farbotko 2018-01-03 This book addresses the question of domestic environmental labour from an ecofeminist perspective. A work of cultural geography, it explores the proposition that the practice and politics of domestic labour being undertaken in the name of ‘the environment’ needs to be better recognized, understood and accounted for as a phenomenon shaped by, and shaping of, gender, class and spatial relations. The book argues that a significant yet neglected phenomenon worthy of research attention is the upsurge in voluntary, and yet mostly unrecognized, domestic environmental labour in high-consuming households in late modernity, with the burden often falling on women seeking to green their lives and homes in aid of a sustainable planet. Further, because domestic

environmental labour is undervalued in governance and the formal economy, much like other types of domestic labour, householders have become an unrecognized and unaccounted-for supply of labour for the greening of capitalism. Situated within broad global debates on links between ecological and social change, the book has relevance in the many jurisdictions around the world in which households are positioned as sites of environmental protection through green consumption. The volume engages existing interest in household environmental behaviour and practice, advancing understanding of these topics in new ways.

Green Households Klaas Jan Noorman
2014-01-14 Households are one of the main sources of waste and of other environmental impacts. This is a study of domestic consumption. Drawing on empirical research largely from The Netherlands, it takes households as consumer units and examines the

entire household metabolism. This includes the way domestic demand can influence where and how goods and services are produced, resource flows through households, and the differential impacts of different lifestyles. It shows both what would constitute sustainable domestic consumption and how far there is to go to achieve this.

Challenging Consumption Anna R. Davies
2014-05-16 Sustainable consumption is a central research topic in academic discourses of sustainable development and global environmental change. Informed by a number of disciplinary perspectives, this book is structured around four key themes in sustainable consumption research: Living, Moving, Dwelling and Futures. The collection successfully balances theoretical insights with grounded case studies, on mobility, heating, washing and eating practices, and concludes by exploring future sustainable consumption research pathways and policy recommendations. Theoretical

frameworks are advanced throughout the volume, especially in relation to social practice theory, theories of behavioural change and innovative visioning and backcasting methodologies. This groundbreaking book draws on some conceptual approaches which move beyond the responsibility of the individual consumer to take into account wider social, economic and political structures and processes in order to highlight both possibilities for and challenges to sustainable consumption. This approach enables students and policy-makers alike to easily recognise the applicability of social science theories.

Handbook of Research on Sustainable Consumption Lucia A. Achieving Economic Growth and Welfare Through Green Consumerism Sinnappan, Punitha 2023-07-10 One of the greatest global challenges is to integrate economic growth and welfare with environmental sustainability. The 12th goal under the United Nations Sustainable Development Goals (SDG-12) addresses this challenge by calling for sustainable consumption and production patterns. It is a holistic and responsible approach that entails the production, acquisition, consumption, and disposal of goods and services based on their pro-environmental benefits. Consumers want to act green, but they expect businesses to lead the way. As such, marketers are playing an important role in encouraging green consumerism by reinforcing sustainability in behavioral patterns. Actionable steps need to be taken to encourage sustainable consumption and align consumers' behaviors with their stated preferences. Achieving Economic Growth and Welfare Through Green Consumerism offers a

comprehensive analysis of green consumerism, taking into account the diversity of views and debates surrounding the ideology. The diversity of topics and multidisciplinary viewpoints offer an insightful overview of the nature of green consumerism, its manifestations, issues, and practices. Covering topics such as consumption behavior, green marketing tools, and purchasing behavior, this premier reference source is a pivotal resource for business leaders, business analysts, economists, marketers, students and educators of higher education, researchers, and academicians.

Negotiating Environmental Change F.

Berkhout 2003-01-01 The ESRC/GEC programme has made a major contribution in terms of environmental social science research. The chapters in this book provide incisive, detailed and reflective critiques of the development of knowledge over the last ten years and provide powerful and important messages about the challenges presented by the

complex relationship between environmental and social change. The book should be essential reading for all researchers and also for all policymakers who are grappling with questions about how to respond to environment/society controversies. Judith Petts, Birmingham University, UK and Member of the Royal Commission on Environmental Pollution Global environmental change will be with us forever. But how it happens in the future, and with what effect on the planet and its peoples depends to a large extent on how the international agreements, national politics and local actions play out. This collection provides the most comprehensive assessment yet of these critical interconnections, and reveals how social scientists are making an invaluable contribution to the creation of more science and just livelihoods in a future world. Tim O Riordan, University of East Anglia, UK An aphrodisiac to the tepid response of positivist social science. People are not merely actors, perpetrators and

victims, in an environmental drama. The critical social theorists in this book constructively show us how people are improvising the stage and the script as we update our understanding of nature, what constitutes a good life, and our individual and collective options. Richard B. Norgaard, University of California, Berkeley, US

Negotiating Environmental Change is a child of the ESRCs Global Environmental Change Programme, by far the biggest piece of work by social scientists in the United Kingdom during the 1990s. At the beginning of the twenty-first century the balance sheet needs to be drawn up: what do our policies, insights and values owe to the collaborative efforts of social scientists? This book suggests that ideas and approaches that were conceived at a time when the Ozone Hole , Global Warming and Biodiversity Losses were beginning to resonate in academic and policy circles have now entered the British and European psyche. The challenge of forward thinking in the twenty-first century, in which the

environment is central to most of the issues that concern social science, is to demonstrate that the environment is not a separate territory . Environmental thinking and practice affects us in various guises: governance and democracy, business and management, risk and everyday consumption: the substance of this book.

Negotiating Environmental Change makes clear the contribution that new thinking is making to problems that were not looked upon as environmental a decade ago, but which we now see as being at the forefront of global research and policy agendas. Michael Redclift, King s College London, UK Major advances have been made recently in environmental social science but the context and importance of this research has also changed. Social and natural science studies of the environment have begun to interact more closely with each other and many analysts now agree that an understanding of environmental problems often depends on an understanding of the attitudes and behaviour of

people and organisations. Moreover, policy and public debates have also shown that many assumptions that underpin arguments about sustainable development need to be reconsidered and re-framed. This book by leading researchers presents a critical review of debates in environmental social science over the past decade. Three broad areas are covered in ten chapters: the problems of scientific uncertainty and its role in shaping environmental policy and decisions; the development of institutional frameworks for governing natural resources; and the link between economic and technological change and the environment. The book begins with an overview essay exam

Problem-Solving Exercises in Green and Sustainable Chemistry Albert S. Matlack

2015-11-05 When confronted with a problem in science, the way to proceed is not always obvious. The problem may seem intractable or there may be many possible solutions, with some

better than others. Problem-Solving Exercises in Green and Sustainable Chemistry teaches students how to analyze and solve real-world problems that occur in an environmental context, and it encourages creativity in developing solutions to situations based on events that have actually taken place. The problems described in this book are relevant and stimulating in learning and understanding the principles of green and sustainable chemistry. They address various aspects of the field, including: Toxicity Waste generation and disposal Chemical accidents Energy efficiency New policy development The final chapter contains proposed solutions to the presented problems and provides commentaries and references to relevant literature. This book also prompts students to become more comfortable with the idea of multiple "correct" answers to problems. It emphasizes the reality that green chemistry is about making practical decisions and weighing multiple factors that are often

conflicting, thus making it difficult or impossible to apply one perfect solution to a given situation. Problem-Solving Exercises in Green and Sustainable Chemistry prepares students to solve challenging problems, whether as green chemists, as architects designing energy-efficient buildings, or as environmentally-conscious citizens.

Social Influence and Sustainable Consumption

Elizabeth B Goldsmith 2015-07-11 This forward-looking volume examines the role of social influence--including social media--in creating and fostering sustainable consumer behavior. Using the concepts behind social influence theory as a launching point, it describes humans' need for social networks and identifies the core components of buying, such as consumer goals and the gathering of opinions. From here, chapters examine ways social influence can encourage and support sustainable consumption, from buying green products to recycling packaging materials to supporting

environmentally responsible brands. Real-world examples, critical thinking questions, a breakdown of strategies for influencing behavior, and pertinent references give the book extra dimensions of value. Among the featured topics: Social influence: why it matters. Values, attitudes, opinions, goals, and motivation. What we buy and who we listen to: the science and art of consumption. Decision making and problem solving. Households: productivity and consumption. Sustainably managing resources in the built environment. Between its nuanced understanding of social connections and its up-to-date lens on technology, Social Influence and Sustainable Consumption is must reading for researchers in the fields of consumer psychology, consumer behavior, and consumer sustainability.

A Handbook of Globalisation and Environmental Policy, Second Edition Frank Wijen 2012-01-01 Acclaim for the first edition:
This is undoubtedly a useful collection of

essays for environmental policy-makers and anyone interested in the relationship between national government and transnational forces. . . the collection brings together some interesting perspectives and should prove a useful complement to the existing political sociology of the environment. Æ International Sociology Æ Review of Books Æ The Handbook of Globalisation and Environmental Policy is a very important book. More than 40 experienced authors, including some of the most important international thought leaders of our time, have confronted a crucial question: How can and should national governments come to grips with the need for global action on a wide range of increasingly urgent environmental challenges that exceed their authority and capability? Through close examination of numerous case studies, a balanced perspective that takes government, business and civil society into account, and fresh interdisciplinary thinking about a range of policy tools, the Handbook

offers a treasure-trove of new concepts and new perspectives. The authors conclude that by acknowledging the ongoing erosion of national sovereignty and accepting the growing need to work together in supranational forums, national governments can, in fact, increase their capacity to shape their own destiny. Æ Lawrence Susskind, Massachusetts Institute of Technology, US Æ In an increasingly interdependent world, global forces affect both the design and effectiveness of environmental policy. This Handbook provides an unusually creative and comprehensive guide, not only to the nature of these forces and their impacts, but also to how a better understanding of these forces can provide a foundation for improving the effectiveness of environmental policy. Æ Tom Tietenberg, Colby College, US In the current era of globalisation, national governments are increasingly exposed to international influences that present new constraints and opportunities for domestic

environmental policies. This comprehensive, revised Handbook pushes the frontiers of theoretical and empirical knowledge, and provides a state-of-the-art examination of the multifaceted effects of globalisation on environmental governance. Including substantially revised as well as new contributions from leading authorities, the Handbook offers an insightful overview of recent developments at the intersection of globalisation and national environmental policy. It covers themes including national regimes, trade rules, types of goods, federalism, innovation, standards, citizen-consumers, developing countries, policy networks, partnerships, and carbon trading. The Handbook's depth and scope will appeal to a broad and varied readership, across academics, students, and policy-makers interested in public and private governance, environmental economics, international relations, environmental politics and law, sociology, and political science.

Environmental Policy and Household Behaviour
Patrik Soderholm 2013-07-04 Our behaviour in our own homes - our recycling habits, consumer choices and transport preferences - all have a huge impact on the environment locally and globally. Governments across the world are trying to formulate and implement policies to encourage and enforce more sustainable household actions. Yet so often these policies fail to have the desired effects because of a lack of understanding of the complex interplay of policy and individual behaviour. This book examines this interplay, looking at the role of values, attitudes and constraints in the links between policy and changing behaviour at the household level. The first part of the book explores the theoretical background looking at the politics of lifestyles and lifestyle change, policy legitimacy and barriers and facilitators for pro-environmental behaviour. The second part is made up of in-depth case studies from Sweden - one of the fore-running countries in this area -

examining three main types of household behaviour: waste and recycling; consumption and labelling; and transportation choices. Within these case studies, the contributors examine what policy initiatives have and haven't worked and the role of values and constraints in those processes. This is the first inter-disciplinary, in-depth look at how environmental policy enters the private, domestic sphere. The theoretical insights and policy guidance the book offers will be vital in the drive to generate behaviour change at the household level and the move towards sustainable societies.

New Tools for Environmental Protection

National Research Council 2002-06-13 Many people believe that environmental regulation has passed a point of diminishing returns: the quick fixes have been achieved and the main sources of pollution are shifting from large "point sources" to more diffuse sources that are more difficult and expensive to regulate. The political climate has also changed in the United States

since the 1970s in ways that provide impetus to seek alternatives to regulation. This book examines the potential of some of these "new tools" that emphasize education, information, and voluntary measures. Contributors summarize what we know about the effectiveness of these tools, both individually and in combination with regulatory and economic policy instruments. They also extract practical lessons from this knowledge and consider what is needed to make these tools more effective. The book will be of interest to environmental policy practitioners and to researchers and students concerned with applying social and behavioral sciences knowledge to improve environmental quality.

Household Sustainability Chris Gibson
2013-01-01 ÔThe question Chris Gibson and his colleagues answer in this book is simple: ÒWhy is it not easy being green?Ó In 20 concise, focused and accessible chapters Ð from birthing to dying, from toilets to Christmas Ð they unveil

the ambiguities, instabilities and paradoxes of affluent household living in the 21st century. In so doing, they temper the easy rhetoric of sustainable lifestyles with some authentic realities drawn from the affluent world. Earth system science is showing us the deep complexity of our material planet. This book brilliantly reflects back to us the complex materiality of our cultural lives. ð Mike Hulme, University of East Anglia, UK Contrary to the common rhetoric that being green is ÔeasyÕ, household sustainability is rife with contradiction and uncertainty. Households attempting to respond to the challenge to become more sustainable in everyday life face dilemmas on a daily basis when trying to make sustainable decisions. Various aspects of life such as cars, computers, food, phones and even birth and death, may all provoke uncertainty regarding the most sustainable course of action. Drawing on international scientific and cultural research, as well as innovative ethnographies,

this timely book probes these wide-ranging sustainability dilemmas, assessing the avenues open to households trying to improve their sustainability. The authors engage critically, and constructively, with the proposition that households are a key scale of action on climate change. They confront dilemmas of practice and circumstance, and cultural norms of lifestyle and consumerism that are linked to troublesome environmental problems ð and question whether they can be easily unsettled. The work also illuminates the informal and often unheralded work by households ð frequently the poorest ð in reducing their environmental burden. This important book is critical to understanding both the barriers to household sustainability and the ÔunsungÕ sustainability work carried out by householders. Containing a unique combination of science and cultural research, this fascinating book will appeal to researchers and students of environmental science, environmental studies, sustainability studies, climate change

adaptation, geography, sociology, cultural studies, science and technology studies, as well as energy studies and housing research. Policy-makers in various levels of government working through sustainability problems, environmental educators, social planners and sustainability officers working for governments, will also find much to interest them in this unique book.

Conceptualizing Environmental Citizenship for 21st Century Education Andreas Ch.

Hadjichambis 2020-02-26 This Open Access book is about the development of a common understanding of environmental citizenship. It conceptualizes and frames environmental citizenship taking an educational perspective. Organized in four complementary parts, the book first explains the political, economic and societal dimensions of the concept. Next, it examines environmental citizenship as a psychological concept with a specific focus on knowledge, values, beliefs and attitudes. It then explores environmental citizenship within the

context of environmental education and education for sustainability. It elaborates responsible environmental behaviour, youth activism and education for sustainability through the lens of environmental citizenship. Finally, it discusses the concept within the context of different educational levels, such as primary and secondary education in formal and non-formal settings. Environmental citizenship is a key factor in sustainability, green and cycle economy, and low-carbon society, and an important aspect in addressing global environmental problems. It has been an influential concept in many different arenas such as economy, policy, philosophy, and organizational marketing. In the field of education, the concept could be better exploited and established, however. Education and, especially, environmental discourses in science education have a great deal to contribute to the adoption and promotion of environmental citizenship.

Household Waste in Social Perspective Stewart Barr 2017-07-05 The principal barrier to the introduction of more sustainable disposal methods has previously been thought to be the lack of both available knowledge and an awareness of the benefits and ease of these systems. Illustrated by an in-depth analysis of waste reduction, reuse and recycling behaviour in Exeter, Devon, this volume questions these assumptions. It not only provides a fresh examination of the previous (mainly US-focused) research into the underlying determinants of waste management behaviour from a geographical perspective, but also develops a new theoretical model based on the Theory of Reasoned Action. Linking three broad categories: environmental values, situational characteristics and psychological factors, the book provides a timely evaluation of research on household waste management, develops an original analytical model and demonstrates the utility and importance of focusing on individual

attitudes.

OECD Studies on Environmental Policy and Household Behaviour How Green is Household Behaviour? Sustainable Choices in a Time of Interlocking Crises OECD 2023-06-13 Household choices – such as what to eat, how to get to work and how to heat our homes – have significant implications for the environment. With the urgency of environmental action and the need to shift to more sustainable consumption patterns, making more sustainable choices holds great potential to reduce environmental impacts.

Material Geographies of Household Sustainability

Andrew Gorman-Murray 2016-05-13 Charting new research directions, this book constructs a series of imperatives for linking culturally informed research around household sustainability with policy and planning. The household, or 'home', is a critical scale for understanding activities that connect individual behaviours and societal attitudes. The focus on the household in this collection

provides a window into the sheer diversity of homemaking and maintenance activities that entail resource use. These practices have affective or emotive dimensions as well as habitual aspects. Diversity, innovation and change at the household scale is often missed in policy approaches which assume that simplistic economic motivations drive demand and this can in turn be 'managed' through regulation or market pricing. The research challenge extends beyond describing existing unsustainable economies driving resource intensive behaviour to consider realistic options for transformations in cultural practices, material relationships and, ultimately, the political economies they sit within. Without change in these systems, government initiatives to promote ecological modernisation run the risk of simply green-washing the very economies of consumption that currently drive unsustainable practices. Social and cultural change at the household level is critical to promoting sustainability at a range of

wider scales.

Green Development W. M. Adams 2003-09-02
This revised and updated new edition retains the clear and powerful argument which characterized the original. It gives a valuable analysis of the theory and practice of sustainable development and suggests that at the start of the new millennium, we should think radically about the challenge of sustainability. Fully revised, this latest edition includes further reading, chapter outlines, chapter summaries and new discussion topics, and explores: the roots of sustainable development thinking and its evolution in the last three decades of the twentieth century the dominant ideas within mainstream sustainable development the nature and diversity of alternative ideas about sustainability the problems of environmental degradation and the environmental impacts of development strategies for building sustainability in development from above and below. Offering a synthesis of theoretical ideas

on sustainability based on the industrialized economies of the North and the practical, applied ideas in the South which tend to ignore 'First World' theory, this important text gives a clear discussion of theory and extensive practical insights drawn from Africa, Latin America and Asia.

Sustainable Consumer Services Minna Halme
2012-05-16 The goal for consumer oriented business should be to make a profit and to do it without costing the Earth. Yet exactly how to satisfy the needs and wants of consumers without contributing to environmental degradation is proving to be the essential, but elusive goal for businesses in the 21st century. The leading solution is to substitute material consumption with the consumption of services that offer consumers convenience and value but eliminate much of the inefficiency and waste associated with our throw-away society. Sustainable consumer services for households - services that are delivered to consumers at the premises such as home delivery of organic food, appliance leasing, mobile laundry services, internet marketing of homeservices or car pool

schemes - provide a key part of the answer of how to reduce material consumption and waste while still turning a profit. Yet until now there has been little information to guide the development of such business models and practices, and to develop ways to make service-based consumption more attractive to consumers than object-ownership-based models. This book, equally a practical business handbook and business course text, provides the missing link in sustainable household service competitiveness by examining the issues, looking at business models, providing dozens of real-life best-practice examples and presenting data from the first large-scale consumer survey that explains consumer behaviour and what they want from home service provision. The book is an essential resource for businesses and public or nonprofit organizations and housing organizations entering the growing consumer services market. It provides a wealth of business know-how on what works and what doesn't, how

to avoid potential pitfalls, and how to provide consumer services at the household level that are profitable, environmentally sustainable and that add to consumers quality of life.

Tools, Techniques & Approaches for Sustainability William R. Sheate 2010 This unique volume brings together key writings from experts drawn from the first ten years of the Journal of Environmental Assessment Policy and Management (JEAPM), launched in 1999 as a forum for encouraging better linkages between environmental assessment and management tools. The book is structured around four themes that focus on the characteristics of tools that influence their ability to link together effectively: The Nature of Tools; The Nature of Decision-Making and Institutional Context; The Nature of Engagement and The Nature of Sustainability. Edited and introduced by William Sheate, founding and present editor of JEAPM, the book provides an analysis of what makes for successful linking of assessment and

management tools, supported by theoretical and practical examples. Key authors include Roland Clift, David Gadenne, Robert Gibson, Neils Faber, Thomas Fischer, David Lawrence, MNns Nilsson, Bronwyn Ridgway, and Frank Vanclay. Sample Chapter(s). How Green is the City? Dimitri Devuyt 2001
This book deals with practical ways to reach a more sustainable state in urban areas through such tools as strategic environmental assessment, sustainability assessment, direction

analysis, baseline setting and progress measurement, sustainability targets, and ecological footprint analysis.

The Australian Green Consumer Guide

Tanya Ha 2008 There has never been a greater need for a green consumer guide to help people make informed choices about the products they buy. This book will remain relevant for years to come, enabling people to apply eco principles to new products as they enter the marketplace.

Sustainable Consumption Dale Southerton

2004 This text empirically examines key theoretical debates underpinning the social sciences at the beginning of the 21st century. These include: the relations between production and consumption; and the escalation of choice and the emergence of differentiation in service provision and lifestyle orientation.

Sustainable Consumer Services Minna Halme

2012 The goal for consumer oriented business should be to make a profit and to do it without costing the Earth. Yet exactly how to satisfy the

needs and wants of consumers without contributing to environmental degradation is proving to be the essential, but elusive goal for businesses in the 21st century. The leading solution is to substitute material consumption with the consumption of services that offer consumers convenience and value but eliminate much of the inefficiency and waste associated with our throw-away society. Sustainable consumer services for households - services that are delivered to consumers at the premises such as home delivery of organic food, appliance leasing, mobile laundry services, internet marketing of homeservices or car pool schemes - provide a key part of the answer of how to reduce material consumption and waste while still turning a profit. Yet until now there has been little information to guide the development of such business models and practices, and to develop ways to make service-based consumption more attractive to consumers than object-ownership-based models. This book,

equally a practical business handbook and business course text, provides the missing link in sustainable household service competitiveness by examining the issues, looking at business models, providing dozens of real-life best-practice examples and presenting data from the first large-scale consumer survey that explains consumer behaviour and what they want from home service provision. The book is an essential resource for businesses and public or nonprofit organizations and housing organizations entering the growing consumer services market. It provides a wealth of business know-how on what works and what doesn't, how to avoid potential pitfalls, and how to provide consumer services at the household level that are profitable, environmentally sustainable and that add to consumers' quality of life.

Global Warming and Social Innovation Andre Faaij 2013-06-17 Societies need to reduce emissions of greenhouse gases by 80 per cent in order to counter the risks of climate change.

This study envisions a climate neutral society - one where the output of polluting gases is minimised by social innovations set up in households, by local authorities, through developments in information and communications technologies and dematerialization, and through the shift towards product service systems and emissions trading. The work discusses the possibilities for steering and orchestrating this long-term transition towards a climate-friendly society, mapping paths through current dilemmas in climate policy and exploring the legal issues of making this transition.

Green Consumerism Juliana Mansvelt 2010-05-04 Via 150 signed entries, *Green Consumerism: An A-to-Z Guide* offers a wide-ranging examination of green consumerism, one reflecting the diversity of views and debates surrounding the concept. The multiplicity of topics and disciplinary perspectives provides a useful survey of the nature of green

consumerism, the forms it takes, the issues impacting it, and the practices it involves. Contributing authors also provide insights into the social and spacial constitution of green consumerism, its multifaceted and sometimes contested contours, and the ways it is embedded and shaped in relation to wider cultural, economic, political and environmental processes. Readers will derive a sense not only of what green consumerism has become, but more critically, how it might evolve, addressing both limitations and possibilities for real and meaningful change. Vivid photographs, searchable hyperlinks, numerous cross references, an extensive resource guide, and a clear, accessible writing style make the Green Society volumes ideal for classroom use as well as for research.

Towards Sustainable Household Consumption? Trends and Policies in OECD Countries OECD 2002-04-29 This book provides a comprehensive analysis of household

consumption patterns in five key areas: food, tourism-related travel, energy, water and waste generation.

The Green Bundle Magali A. Delmas 2018-07-31 The market for green products has expanded rapidly over the last decade, but most consumers need something more than eco-benefits to motivate their purchases. Magali A. Delmas and David Colgan argue that many green products now offer the total package—a "green bundle" that checks the environmental box, but also offers improved performance, health benefits, savings, and status. To help consumers cut through the noise and make their best decisions, we need new strategies. The Green Bundle offers some of the best and most effective communication techniques for pushing consumers in the right direction. Framing product benefits to motivate behavior is the key. Combining insights from sustainable business and behavioral economics, Delmas and Colgan show managers how to lead buyers from

information to action. If you are looking to win over the convenient consumer or understand how companies can create the next tipping point in green consumption, this is the research-based, practical guide for you.

Exploring Sustainable Consumption Maurie J. Cohen 2001-09 Consumerism is increasingly recognized as a major drain on global resources and the search for sustainable consumption is emerging as a key policy issue. This text locates the problem within a specific history and recruits specialist opinions from a variety of disciplines.
