Greenwich and Woolwich at Work Mary Mills 2002-08

Greenwich and Woolwich were major centres for industry. Their position on the River Thames and the presence of the Tudor Royal Palace at Greenwich ensured that large industrial workplaces were an early feature of the area- in particular the two royal dockyards, and other trades based on arms manufacture. By the 19th and 20th centuries the emphasis was on armaments, cables, shipbuilding and heavy engineering. There were many specialities - marine steam engines, fire engines, etc. There were also other significant, smaller, industries - which include both the largest gas works and the largest glass works in Europe. Several of these workplaces were on a massive scale and, in particular, the Royal Arsenal at Woolwich - a vast armaments works hidden behind high walls

which at its peak employed 80,000 people and was arguably the largest such establishment in the world. Many of these industries were centres of excellence and innovation, which required a highly skilled workforce. This book illustrates these industries and the people who worked in them in a collection of over 200 photographs.

**Working Capital** Nick Buck 2013-09-13 For decades the cities of the developed world were seen as problem-beset relics from times of low mobility and slow communications. But now, their potential to sustain creativity, culture and innovation is perceived as crucial to success in a much more competitive global economy. The vital requirement to secure and sustain this success is argued to be the achievement of social cohesion. Working Capital provides a rigorous but accessible analysis of these key issues taking London as its test case. The book provides the first substantial analysis of key economic, social and structural issues that the new London administration needs to deal with. In a wider context, its critical assessment of the bases of the new urbanism and of the global city thesis will raise

**Full Employment in a Free Society (Works of William H. Beveridge)** William H. Beveridge 2014-11-27

Beveridge defined full employment as a state where there are slightly more vacant jobs than there are available workers, or not more than 3% of the total workforce. This

book discusses how this goal might be achieved, beginning with the thesis that because individual employers are not capable of creating full employment, it must be the responsibility of the state. Beveridge claimed that the upward pressure on wages, due to the increased bargaining strength of labour, would be eased by rising productivity, and kept in check by a system of wage arbitration. The cooperation of workers would be secured by the common interest in the ideal of full employment. Alternative measures for achieving full employment included Keynesian-style fiscal regulation, direct control of manpower, and state control of the means of production. The impetus behind Beveridge's thinking was social justice and the creation of an ideal new society after the war. The book was written in the context of an economy which would have to transfer from wartime direction to peace time. It was then updated in 1960, following a decade where the average

unemployment rate in Britain was in fact nearly 1.5%.
