Shaping the Digital Dissertation Virginia Kuhn 2021-05-04 This volume is a timely intervention that not only helps demystify the idea of a digital dissertation for students and their advisors, but will be broadly applicable to the work of librarians, administrators, and anyone else concerned with the future of graduate study in the humanities and digital scholarly publishing. Roxanne Shirazi, The City University of New York Digital dissertations have been a part of academic research for years now, yet there are still many questions surrounding their processes. Are interactive dissertations significantly different from their paper-based counterparts? What are the effects of digital projects on doctoral education? How does one choose and defend a digital dissertation? This book explores the wider implications of digital scholarship across institutional, geographic, and disciplinary divides. The volume is arranged in two sections: the first, written by senior scholars, addresses conceptual concerns regarding the direction and assessment of digital dissertations in the broader context of doctoral education. The second section consists of case studies by PhD students whose research resulted in a natively digital dissertation that they have successfully defended. These early-career researchers have been selected to represent a range of disciplines and institutions. Despite the profound effect of incorporated digital tools on dissertations, the literature concerning them is limited. This volume aims to provide a fresh, up-to-date view on the digital dissertation, considering the newest technological advances. It is especially relevant in the European context where digital dissertations, mostly in arts-based research, are more popular. *Shaping the Digital Dissertation* aims to provide insights, precedents and best practices to graduate students, doctoral advisors, institutional agents, and dissertation committees. As digital dissertations have a potential impact on the state of research as a whole, this edited collection will be a useful resource for the wider academic community and anyone interested in the future of doctoral studies.

Thesis Writing for Master's and Ph.D. Program Subhash Chandra Parija 2018-11-03 This book on Thesis Writing for Master's and Ph.D. program focuses on the difficulties students encounter with regard to choosing a guide; selecting an appropriate research title considering the available resources; conducting research; and ways to overcome the hardships they face while researching, writing and preparing their dissertation for submission. Thesis writing is an essential skill that medical and other postgraduates are expected to learn during their academic career as a mandatory partial requirement in order to receive the Master's degree. However, at the majority of medical schools, writing a thesis is largely based on self-learning, which adds to the burden on students due to the tremendous amount of time spent learning the writing skills in addition to their exhausting clinical and academic work. Due to the difficulties faced during the early grooming years and lack of adequate guidance, acquiring writing skills continues to be a daunting task for most students. This book addresses these difficulties and deficiencies and provides comprehensive guidance, from selecting the research title to publishing in a scientific journal.

Completing Your Evaluation Dissertation, Thesis, or Culminating Project Tamara M. Walser 2020-08-13 This practical, user-friendly resource helps students successfully complete an evaluation capstone: a dissertation, thesis, or culminating project where a student conducts an evaluation as their capstone experience. Their framework, and this book, is organized by six fundamentals of evaluation practice: quality; stakeholders; understanding the program; values; approaches; and maximizing evaluation use. Throughout the book they use the metaphor of the journey to depict the processes and activities a student will experience as they navigate an evaluation capstone and the six fundamentals of evaluation practice. In pursuit of a completed capstone, students grow professionally and personally, and will be in a different place when they reach the destination and the capstone journey is complete.

Ethical futures: bioscience and food horizons Kate Millar 2023-09-04 In an ever changing interconnected world, the agriculture and food system faces constant challenges in many forms, such as the impacts of climate change, uncertainty surrounding the use of novel technologies and the emergence of new zoonotic diseases. Alongside these challenges professionals working in the food system are faced with opportunities to improve food production and distribution. As decision-makers attempt to balance these threats and opportunities in order to secure more sustainable production systems, the key question that arises is: What do we envisage as the future for agriculture and food production? With numerous voices advocating different and sometimes conflicting approaches, ranging from organic farming to wider use of GMOs through in vitro meat production, this discussion of the future raises significant ethical questions. The contributions in this book bring together a diverse group of authors who explore a set of themes relating to the ethical dimensions of the agriculture and food futures, including the role of novel technologies, the potential issues raised by the use of biofuels, the ethics of future animal production systems, concepts of global food security, as well as chapters on food governance priorities and educational aspects. It is intended that this volume serves as an interesting collection and acts as a source of stimulation that will contribute to wider debate and reflection on the future of the agriculture and food system.

Completing a Professional Practice Dissertation Jerry W. Willis 2010-06-01 A growing number of both established and newly developed doctoral programs are focusing on the preparation of practitioners rather than career researchers. Professional doctorates such as the Doctor of Nursing Practice (DNP), Doctor of Education (EdD), Doctor of Pharmacy (PharmD), Doctor of Professional Studies (DProf or DPS), and the Doctor of Psychology (PsyD) are, in fact, just a few of the professional doctorates being offered today. Professional doctorates are the fastest growing segment of doctoral education. The nature of the dissertation and the process of completing a dissertation can be quite different in a professional practice doctoral program but there are few resources for both students and faculty involved in completing and mentoring such dissertations. This book was written specifically for students and faculty involved in professional practice dissertation work. It addresses both the tasks and procedures that professional practice dissertations have in common with dissertations in "research" doctoral programs as well as the tasks and issues that are more common in professional practice doctoral programs. For example, negotiating entry into applied settings and securing the cooperation of practicing professionals is covered, as are alternative models for the dissertation (e.g., the "three article dissertation" or "TAD"). The book also covers tasks such as getting IRB approval for applied dissertation research conducted in the field and how to propose and carry out studies based on applied and professional models of research. This book, written by three experienced mentors of professional practice dissertation students, is the comprehensive guide for both students and faculty.

International Handbook of Research in Professional and Practice-based Learning Stephen Billett 2014-07-15 The International Handbook of Research in Professional and Practice-based Learning discusses what constitutes professionalism, examines the concepts and practices of professional and practice-based learning, including associated research traditions and educational provisions. It also explores professional learning in institutions of higher and vocational education as well the practice settings where professionals work and learn, focusing on both initial and ongoing development and how that learning is assessed. The Handbook features research from expert contributors in education, studies of the professions, and accounts of research methodologies from a range of informing disciplines. It is organized in two parts. The first part sets out conceptions of professionalism at work, how professions, work and learning can be understood, and examines the kinds of institutional practices organized for developing occupational capacities. The second part focuses on procedural issues associated with learning for and through professional practice, and how assessment of professional capacities might progress. The key premise of this Handbook is that during both initial and ongoing professional development, individual learning processes are influenced and

shaped through their professional environment and practices. Moreover, in turn, the practice and processes of learning through practice are shaped by their development, all of which are required to be understood through a range of research orientations, methods and findings. This Handbook will appeal to academics working in fields of professional practice, including those who are concerned about developing these capacities in their students. In addition, students and research students will also find this Handbook a key reference resource to the field.

Developing Quality Dissertations in the Humanities Barbara E. Lovitts 2023-07-03 This is one of three short booklets designed to be given to graduate students as they begin their studies. These booklets explain the purposes of the dissertation and the criteria by which it will be assessed. They help students understand the context of their course work; the need to take an active role in shaping their studies; and the importance of thinking ahead about the components of the dissertation and the quality of scholarship they will need to demonstrate. These booklets are intended to support the dissertation research and writing process by providing faculty and advisors with guidelines for setting clear expectations for student performance, and with a model for helping students produce the desired quality of work. They encourage dialogue between faculty and students about the quality of the components of their dissertation project. They include rubrics that students can use to self-assess their work and that can aid faculty in providing focused feedback. Setting explicit targets and benchmarks of excellence of the sort advocated in these booklets will enable departments and universities to respond to demands for accountability with clear criteria for, and evidence of, success; and will raise the overall quality of student performance.
