Clara Clement 2014-11-27 ARCHITECTURE seems to me to be the most wonderful of all the arts. We may not love it as much as others, when we are young perhaps we cannot do so, because it is so great and so grand; but at any time of life one can see that in Architecture some of the most marvellous achievements of men are displayed. The principal reason for saying this is that Architecture is not an imitative art, like Painting and Sculpture. The first picture that was ever painted was a portrait or an imitation of something that the painter had seen. So in Sculpture, the first statue or bas-relief was an attempt to reproduce some being or object that the sculptor had seen, or to make a work which combined portions of several things that he had observed; but in Architecture this was not true. No temples or tombs or palaces existed until they had first taken form in the mind and imagination of the builders, and were created out of space and nothingness, so to speak. Thus

Painting and Sculpture are imitative arts, but Architecture is a constructive art; and while one may love pictures or statues more than the work of the architect, it seems to me that one must wonder most at the last. We do not know how long the earth has existed, and in studying the most ancient times of which we have any accurate knowledge, we come upon facts which prove that men must have lived and died long before the dates of which we can speak exactly. The earliest nations of whose Architecture we can give an account are called heathen nations, and their art is called Ancient or Heathen Art, and this comes down to the time when the Roman Emperor Constantine was converted to Christianity, and changed the Roman Capitol from Rome to Constantinople in the year of our Lord 328. The buildings and the ruins which still remain from these ancient times are in Egypt, Assyria, Persia, Judea, Asia Minor, Greece, Etruria, and Rome. Many of these have been excavated or uncovered, as, during the ages that have passed since their erection, they had been buried away from sight by the accumulation of earth about them. These excavations are always going on in various countries, and men are ever striving to learn more about the wonders of ancient days; and we may hope that in the future as marvellous things may be revealed to us as have been shown in the past. EGYPT: As we consider the Architecture of Egypt, the Great Pyramid first attracts attention on account of its antiquity and its importance. This was built by Cheops, who is also called Suphis, about 3000 years before Christ. At that distant day the Egyptians seem to have been a nation of pyramid-builders, for even now, after all the years that have rolled between them and us, we know of more than sixty of these mysterious monuments which have been opened and explored. Of all these the three pyramids at Ghizeh are best known, and that of Cheops is the most remarkable among them. Those of you who have studied the history of the wars of Napoleon I. will remember that it was near this spot that he fought the so-called Battle of the Pyramids, and that in addressing his soldiers he reminded them that here the ages looked down upon them, thus referring to the many years during which this great pyramid had stood on the border of the desert, as if watching the flight of Time and

calmly waiting to see what would happen on the final day of all earthly things. There have been much speculation and many opinions as to the use for which these pyramids were made, but the most general belief is that they were intended for the tombs of the powerful kings who reigned in Egypt and caused them to be built. The pyramid of Cheops was four hundred and eighty feet and nine inches high, and its base was seven hundred and sixty-four feet square. History of Italian Renaissance Art Frederick Hartt 2003 Frederick Hartt's unrivaled classic is a dazzling journey through four centuries of Italian Renaissance painting, sculpture, and architecture. Its sumptuous color illustrations, fine writing, and in-depth scholarship bring into focus all the elements of this extraordinarily creative period and the remarkable personalities who gave it life. Highlights of this Fifth Edition include: * a striking new design with more than half the artworks illustrated in full color * new views of frescoes and sculptures photographed in their original locations that offer a dynamic insight into the way the art was originally experienced * fresh views of great works of art that have been restored since the last edition * extended captions that identify Renaissance patrons and provide details about historical context, emphasizing how the art was created and why

History of Modern Art H. Harvard Arnason 2010 Long considered "the" survey of modern art, this engrossing and liberally illustrated text traces the development of trends and influences in painting, sculpture, photography and architecture from the mid-nineteenth century to the present day. Retaining its comprehensive nature and chronological approach, it now

comes thoroughly reworked by Elizabeth Mansfield, an experienced art historian and writer, with refreshing new analyses, a considerably expanded picture program, and a more absorbing and unified narrative.

Art Hand-Book; Sculpture, Architecture, Painting: Official Handbook of Architecture and Sculpture and Art Catalogue to the Pan-

American Exposition The act of Congress providing for a federal building and exhibit at the pan-american Exposition states that it is

desirable to encourage the holding of the Exposition to fittingly illustrate the marvelous development of the western hemisphere during the nineteenth century by a display of the arts, industries, manufactures, and products of the soil, mines, and sea. The joint resolution of Congress previously adopted declared that this development was to be illustrated by a demonstration of the reciprocal relations existing between the American Republics and Colonies. In these declarations the real object of the Exposition was comprehensively expressed at the outset, and it has been kept steadily in view. It is clearly revealed in every feature of the Exposition: in the architectural scheme, suggestive of the history of so much of this hemisphere; in the restriction of the exhibits to its resources, industries, products, inventions, arts, and ideas and in the active participation of practically all of its peoples and countries. To

have brought all of those peoples together for the first time in the accomplishment of such an object is the crowning achievement of the Exposition. Looking at Art Peter V. Moak 2016-09-06 This guide contains a new approach to looking at and appreciating art. One not found elsewhere. It makes you aware of abilities you already have to see things in various ways. The key to these abilities is what I call the visual ego, the place between your eyes from which you see the world. The guide then describes a series of particular ways of seeing and making works of art. Finally, it applies these ways, which I call perspectives to works of art, painting, sculpture, architecture, and the decorative arts covering a period of some seventy thousand years. The results I find to be amazing, including new understandings and appreciation of many works of art and artists and their place in the history of art.
