Trade, Growth and Technical Change Daniele Archibugi 1998-02-26 This book, first published in 1998, examines the interconnections between technology, economic growth and international trade.

Technology and Values Craig Hanks 2009-05-04 This anthology features essays and book excerpts on technology and values written by preeminent figures in the field from the early 20th century to the present. It offers an in-depth range of readings on important applied issues in technology as well. Useful in addressing questions on philosophy, sociology, and theory of technology Includes wide-ranging coverage on metaphysics, ethics, and politics, as well as issues relating to gender, biotechnology, everyday artifacts, and architecture A good supplemental text for courses on moral or political problems in which contemporary technology is a unit of focus An accessible and thought-provoking book for beginning and advanced undergraduates; yet also a helpful resource for graduate students and academics

Information, Innovation and Impacts John de la Mothe 2012-12-06 Information, Innovation and Impacts - a joint project between the Program of Research in International Management and Economy (PRIME) at the University of Ottawa and Statistics Canada - brings together economic, social and statistical views of the impacts of the innovative uses of information. It examines the costs as well as the benefits of rapidly expanding availability of data, of information, and of codified knowledge, and it provides suggestions for future work and research. This project fits into an on-going research program at Statistics Canada to develop indicators for science and technology (S&T) in a more coherent manner, and it fits into the research program of PRIME to better understand the dynamics of innovation in an information economy. Together, Statistics Canada and PRIME strive to tell the story of the activities in S&T systems, their interactions, and the outcomes as actors go about the generation, transmission, or mediation of knowledge, information, and of data, as part of the effective functioning of the system.

Computers and Networks in the Age of Globalization Leif Bloch Rasmussen 2013-04-17 In modernity, an individual identity was constituted from civil society, while in a globalized network society, human identity, if it develops at all, must grow from communal resistance. A communal resistance to an abstract conceptualised world, where there is no possibility for perception and experience of power and therefore no possibility for human choice and action, is of utmost importance for the constituting of human choosers and actors. This book therefore sets focus on those human choosers and actors wishing to read and enjoy the papers as they are actually perceiving and experiencing their lives in a diversity of social and cultural contexts. In so doing, the book tries to imagine in what kind of networks humans may choose and act based on the knowledge and empirical evidence presented in the papers. The topics covered in the book include: People and Their Changing Values. Citizens in a Network Society. The Individual and Knowledge Based Organisations. Human Responsibility and Technology. Exclusion and Regeneration. This valuable new book contains the edited proceedings of the Fifth World Conference on Human Choice and Computers (HCC-5), which was sponsored by the International Federation for Information Processing (IFIP) and held in Geneva, Switzerland in August 1998. Since the first HCC conference in 1974, IFIP's Technical Committee 9 has endeavoured to set the agenda for human choices and human actions vis-à-vis computers.

Routledge Library Editions: Leisure Studies Various 1992-07-01 This set of 12 volumes, originally published between 1938 and 2001, amalgamates a wide breadth of research on Leisure Studies, including works on young people and leisure, the family, and political influence on the leisure industry. This collection of books from some of the leading scholars in the field provides a comprehensive overview of the subject how it has evolved over time, and will be of particular interest to students of sociology and leisure studies.

Telematics and Work J.H. Erik Andriesson 2013-05-24 This volume is part of a publication series emerging from an international interdisciplinary study group on "New Technologies and Work (NeTWork)". NeTWork is sponsored by the Werner-Reimers Foundation (Bad Homburg, Germany) and the Maison des Sciences de

l'Homme (Paris). The NeTWork study group has set itself the task of intellectually penetrating various problem domains posed by the introduction and spread of new technologies in work settings. This problem focus requires interdisciplinary co-operation. The usual mode of operating is to identify an important problem within the NeTWork scope, to attempt to prestructure it and then to invite original contributions from European researchers or research teams actively involved in relevant analytic or developmental work. A specific workshop serves to cross-fertilize the different approaches and to help to integrate more fully the individual contributions. The concept of telematics refers to the integration of computer, telecommunication and information technologies. It alludes to the opportunities presented by the technical means to communicate and transfer data over large distances by "intelligent equipment". Teleshopping, teleconferencing, teleworking and telebanking are but a few examples of a development which influences both public and private environments. Both households and workplaces are likely to be thoroughly changed by telematics. This publication emphasises the application of telematics in working environments. The central questions of the book are: How will the present and future development of telematics effect the nature and organization of work, and under which conditions will this development be optimal? From the various contributions it is clear that telematics is not a single direct cause or determinant of particular changes in work and organization. The development and application of telematics depend on decision making of actors at a political scene both outside and inside the work organizations. The effects of the use of these applications appear to be co-determined by many other factors. In fact, the technology interacts with political, economic, and social factors in a complex process that shapes new organizational forms and work relationships.

Home Informatics and Telematics Andy Sloane 2013-03-09 This volume is composed of the best papers submitted to the HOIT2000 conference held in Wolverhampton, U. K. in June 2000. The conference, entitled "IT at home: Virtual influences on everyday life", and the papers reflect the wide variety of these influences that are coming to bear on our everyday experience, be it through the increasing use of computers or the rapid development of new telecommunications systems. The conference has been organised by IFIP Working Group 9. 3 - Home-Oriented Informatics and Telematics (HOIJ) , in association with IFIP Working Group 13. 2- Methodology for user-centred system design. This gives a broad range of topics that are within the sphere of interest of the participants and the authors of the papers. The disciplines involved in the study of this subject area are varied composing computing, telecommunications, psychology, sociology, business studies and others. The conference is the second in a series of HOIT conferences, the first being held in Copenhagen in 1994. The subject is now more mature with the various disciplines being increasingly interested in the home as a research domain. The various technical developments over the time since the first conference have also had a profound effect on the way in which people communicate both in the home and at work. The rise in the use of the Internet has changed the way in which many people view communication and access to information sources.

Media Studies Paul Marris 2000-03 Media Studies: A Reader provides a thorough introduction to the full range of theoretical perspectives on the mass media from the past thirty years. Ranging from the arguments between the American mass communication tradition and the Europe-centered Frankfurt School of the 1940s, to the analyses of communication technologies by Marshall McLuhan and Raymond Williams in the 1960s, Media Studies: A Reader maps the mass media field, its varied and often conflicting histories, and its current debates. Sixty-five articles provide comprehensive coverage of all the main theorists and approaches. The first half, Studying the Media, explores in detail three core elements of media studies: production and regulation of mass media; media texts; and reception and consumption of media. The second half brings together concrete examples of how theoretical debates can be realized in a series of case studies on soap operas, the news, and advertising. A general introduction and introductions to each section summarize and contextualize the debates. Contributors include: Theodor W. Adorno, Marshal McLuhan,

Raymond Williams, Stuart Hall, Annette Kuhn, Jürgen Habermas, John Fiske, Richard Dyer, Niki Strange, Danae Clark, Angela McRobbie, Bill Nichols, Lynne Joyrich, David Morley, Ien Ang, Janice Radway, Henry Jenkins, Tania Modleski, Anne McClintock, Sadie Plant.

International Media Research John R. Corner 2004-01-14 International Media Research offers a rigorous and critical review of key approaches and concerns that have recently defined the field of media research. In this clearly argued collection of essays, the contributors analyze and reflect upon dominant themes and debates that have made media research an increasingly important element of cultural theory. The volume begins with a critical evaluation of the work of the leading media scholar, Elihu Katz, and continues with an exploration of the relationship between media studies and adjacent disciplines: cultural studies and gender and sexuality. Contributors drawn from Britain, America, Canada and Belgium consider the relationships between media research and media policy in different national and international contexts. Focusing on the European Union, East-Central Europe, North America and Latin America, chapters assess the impact of social, economic and political circumstances on policy debates and the shaping of the research agenda. The final chapter adopts a transatlantic perspective in tracing and analysing the history of the media's role in reporting war.

The Information Superhighway and Private Households Walter Brenner 2012-12-06 Wolfgang Glatthaar International Business Machines (IBM), Gennany The rapid developments in information technology (IT) will continue through the coming years. New application areas will be added. Whereas the use of information technology in the past decade has been concentrated primarily on business and public administration, in future the suppliers of information technology will develop an increasing number of applications for the private household (see fig. 1). Traditional perspective: New perspective: 'IT-solutions for the "IT-solutions for the company' private household" ~ \ \ \ \ \ \ \ \ \ \ \ Fig. 1. New perspective on information technology This development has already generated considerable market dynamics. Latest forecasts for the USA suggest that by 1996 at the latest the private household will present greater sales potential for home computers than business and public administration. VI Preface Up to now the use of information technology in the private household has not been regarded as highly significant by either business or science, even though PCs have become widespread in the private sphere. In the ESPRIT framework there have been individual projects dealing with home networks, and in a number of Asian and European countries, as well as America, experiments with interactive television are taking place. Internet and commercial online services are experiencing rapid growth. This application area for information technology in the private household, which is generating increasing business attention, must also be the subject of appropriate research activities.

Freedom and Constraint Fred Coalter 2019-04-24 First published in 1989. In the climate of long-term unemployment, early retirement, and technology that is seen to threaten jobs, 'leisure' has been presented as the solution to a multitude of social problems. The essays in this collection represent the most important

arguments on the problems, myths, and misunderstandings of leisure. Arguing from a range of positions, some sceptical, others more idealistic, they look at the complexities of this field and the social and political problems that surround it. No single argument dominates. What emerges is a live-wire debate on class and gender, employment and economic status, age and education, which brings the discussion of leisure controversially up to date. The book, based on papers presented to conferences of the Leisure Studies Association, divides into sections on leisure and social change, the relationship between leisure and social structures, and the tension between leisure and employment. It takes a critical look at leisure in Britain, Sweden, the Netherlands, and the USA, and at the paradoxes that will determine its future. Whilst refusing to see leisure as a synonym for social progress and liberalization, it argues that the quality of leisure reflects the quality of society itself.

Innovation with Information Technologies in Healthcare Lyle Berkowitz 2012-11-13 This book provides an extensive review of what innovation means in healthcare, with real-life examples and guidance on how to successfully innovate with IT in healthcare.

Innovation in Business and Enterprise: Technologies and Frameworks Al-Hakim, Latif 2010-05-31 Innovation is essential to maintaining organizations' long-term stability and increasing both the quality and value of goods and services. Innovation in Business and Enterprise: Technologies and Frameworks focuses on managing innovation through bridging gaps created from theories, relative advantages or competitiveness, social differences, and innovation capability and performance.

Home Informatics and Telematics: ICT for the Next Billion Alladi Venkatesh 2007-11-15 This volume represents the papers reviewed and accepted for the HOIT2007 conference held at the Indian Institute of Technology Madras in the city of Chennai, India in August 2007. This volume addresses many of the major themes of current interest in the field, with a particular focus on community-based technologies. This comprehensive book is divided into five different sections reflecting the most up-to-date research on computers and society.

Innovation, Networks, and Knowledge Spillovers Manfred M. Fischer 2006-12-02 This volume covers the topic of innovation in three sections, first demonstrating that processes of innovation and technological change are spatially differentiated, second examining the increasing importance of knowledge creation and diffusion, and third raising key issues related to the systems of innovation approach as a conceptual framework for regional innovation analysis. Includes enlightening conceptual and empirical work on the issue of how knowledge spills over locally.

Home Informatics Ian Miles 1988 Defines home informatics as the application of information technology to consumer goods and services.

User-Driven Healthcare and Narrative Medicine: Utilizing Collaborative Social Networks and Technologies Biswas, Rakesh 2010-10-31 "This book explores various individual user-driven strategies that assist in solving multiple clinical system problems in healthcare, using social networking to improve their healthcare outcomes"--Provided by publisher.

A Social History of the Media Asa Briggs 2018-07-26 Written by two leading social and cultural historians, the first two editions of A Social History of the Media became classic textbooks, providing a masterful overview of communication media and of the social and cultural contexts within which they emerged and evolved over time. This third edition has been thoroughly revised to bring the text up to date with the very latest developments in the field. Increased space is given to the exciting media developments of the early 21st Century, including in particular the rise of social and participatory media and the globalization of media. Additionally, new and important research is incorporated into the classic material exploring the continuing importance of oral and manuscript communication, the rise of print and the relationship between physical transportation and social communication. Avoiding technological determinism and rejecting assumptions of straightforward evolutionary progress, this book brings out the rich and varied histories of communication media. In an age of fast-paced media developments, a thorough understanding of media history is more important than ever, and this text will continue to be the first choice for students and scholars across the world.

The Information Society Reader with Raimo Blom 2020-04-02 There has been much debate over the idea of

'the information society'. Some thinkers have argued that information is becoming the key ordering principle in society, whereas others suggest that the rise of information has been overstated. Whatever the case, it cannot be denied that 'informization' has produced vast changes in advanced societies. The Information Society Reader pulls together the main contributions to this debate from some of the key figures in the field. Major topics addressed include: * post-industrialism * surveillance * transformations * the network society * democracy * digital divisions * virtual relations. With a comprehensive introduction from Frank Webster, selections from Manuel Castells, Anthony Giddens, Michel Foucault and Christopher Lasch amongst others, and section introductions contextualising the readings, this book will be an invaluable resource for students and academics studying contemporary society and all things cyber.

Environment & Planning A. 1996

The Place of Home Alison Ravetz 2013-05-24 A comprehensive and in-depth history of the 20th century English home, how it has been created, and how it works for people. It focuses on the various influences bearing on the development of domestic space since 1914 and covers both design and housing policy. Current debates from participation to co-operative housing are examined and several themes not previously brought together are linked, e.g. urban development/house design; technology at home/women and home; social meaning of home.

Information Society Studies Alistair S. Duff 2013-12-02 We are often told that we are "living in an information society" or that we are "information workers." But what exactly do these claims mean, and how might they be verified? In this important methodological study, Alistair S. Duff cuts through the rhetoric to get to the bottom of the "information society thesis." Wide-ranging in coverage, this study will be of interest to scholars in information science, communication and media studies and social theory. It is a key text for the newly-unified specialism of information society studies, and an indispensable guide to the future of this discipline.

Rebuilding Communities in an Age of Individualism Paul Hopper 2017-07-05 As modern societies become increasingly individualistic, this fascinating book examines how we can maintain and revive local communities and community life. It demonstrates how the major developments and processes of our time, notably globalization, post-industrialism and de-traditionalization, contribute to this individualism to the detriment of community life. The author examines how community is a necessary and important component of human life and discusses possible ways in which to arrest its decline. In this regard, strategies geared to fostering trust and social capital are outlined as the basis for reinvigorating community life. The volume provides a coherent and distinct analysis of community as well as offering concrete policy prescriptions to counter the excessive individualism of our times. In both the nature and scope of its analysis, it offers a unique contribution to an extremely important issue in the contemporary period, one that increasingly preoccupies politicians, academics and ordinary citizens.

Public and Private in Thought and Practice Jeff Weintraub 1997-03-15 These essays, by widely respected scholars in fields ranging from social and political theory to historical sociology and cultural studies, illuminate the significance of the public/private distinction for an increasingly wide range of debates. Commenting on controversies surrounding such issues as abortion rights, identity politics, and the requirements of democratization, many of these essays clarify crucial processes that have shaped the culture and institutions of modern societies. In contexts ranging from friendship, the family, and personal life to nationalism, democratic citizenship, the role of women in social and political life, and the contrasts between western and (post-)Communist societies, this book brings out the ways the various uses of the public/private distinction are simultaneously distinct and interconnected. *Public and Private in Thought and Practice* will be of interest to students and scholars in disciplines including politics, law, philosophy, history, sociology, and women's studies. Contributors include Jeff Weintraub, Allan Silver, Craig Calhoun, Daniela Gobetti, Jean L. Cohen, Jean Bethke Elshtain, Alan Wolfe, Krishan Kumar, David Brain, Karen Hansen, Marc Garcelon, and Oleg Kharkhordin.

The Electronic Home Rosalyn Moran 1993 Recoge: 1. The electronic home - 2. What is the electronic home? - 3. The electronic home-What has it to offer us? - 4. Social and spatial issues - 5. Implications for the design of housing and environmental planning.

The Age of Information Stephen Saxby 1990-11-29 This book traces the origins of the present information

technology revolution, the technological features that underlie its impact, the organisations, the companies and technologies which are governing the current and future growth. It explains how the technology works, how it fits together, how the industry is structured and what the future might bring.

Sex/Machine Patrick D. Hopkins 1998 As powerful interacting social and physical forces, gender and technology shape our experiences, cultures, and identities-sometimes in such comfortable and subtle ways that it takes effort to appreciate them; sometimes in such conspicuous and explosive ways that everyone recognizes their importance. Delving into these issues is an opportunity to discover how technology promises or threatens to rewrite our ideas about sex, sexuality, and gender identity.

Managing Technology and Innovation Robert Verburg 2006-06-19 Modern technology and innovation are vital to the success of all companies, be they hi-tech firms or companies seemingly unaffected by technology and innovation; whether established firms or business start-ups. This book focuses on understanding technology as a corporate resource, covering product development, design of systems and the managerial aspects of new and high technology. Topics investigated include: the internal organization of high technology firms the management of technology in society managing innovation dilemmas and strategies. The wide-ranging experience of the teachers and experts contributing to this book has resulted in an integrated, multi-disciplinary, textbook that provides an introductory overview to managing technology and innovation in the twenty-first century. This text is essential reading for students of business and engineering concerned with technology and innovation management.

The Rise of the Network Society Manuel Castells 2011-08-24 This first book in Castells' groundbreaking trilogy, with a substantial new preface, highlights the economic and social dynamics of the information age and shows how the network society has now fully risen on a global scale. Groundbreaking volume on the impact of the age of information on all aspects of society Includes coverage of the influence of the internet and the net-economy Describes the accelerating pace of innovation and social transformation Based on research in the USA, Asia, Latin America, and Europe

Human-Centred Systems in the Global Economy Yuji Masuda 2012-12-06 The arrival of the information society in Japan has radically altered the industrial structure, work patterns and cultural values of its society. The innovation and implementation of information technology has accelerated this change and made its effects more profoundly felt. Because of this, there is now a need to widen the debate on human-centred manufacturing systems to include broader issues such as industrial culture, international economies and global knowledge. *Human Centred Systems in the Global Economy* contains the proceedings of an international workshop held at Tokyo Keizai University which looked at the design of human-centred systems in the context of these technological and social changes. The workshop attracted contributions from internationally known researchers in Europe, Japan, the USA, South East Asia, Eastern Europe and the USSR. The resulting volume is unique in that it addresses the relationship of information technology to Japanese society as a whole, rather than concentrating on technical issues. The papers have been divided into three areas, covering the structure, dimensions, and policies and perspectives of the information society. Specific areas covered include: social and cultural shaping of technology, economic interdependence, technology and knowledge transfer, computer-aided design, management culture and communication technologies. *Human Centred Systems in the Global Economy* provides a comprehensive assessment of the debates on human-centred systems and will be of interest to people in a wide variety of disciplines including information technology, economic development, management science and related studies of social science and humanities.

Social Theory and Communication Technology Terje Rasmussen 2019-06-11 This title was first published in 2001. An investigation of new forms of interaction and communication. The essays address theoretical contributions and insights which may assist us in the understanding of modern society inhabited by a wide range of new media. In order to answer questions on this subject, the text suggests a "structural hermeneutic" - a view on the public as agents embedded in their lifeworlds (rather than as consumers and receivers), who play a large part in reproducing structural and distanced processes of meaning. The

essays explore the implications of such daily practices as making a telephone call or sending an email, receiving money from a bank machine using a credit card, or retrieving information from a Web site. Each of these practices reproduce patterns of information and communication practices, which reshape communication processes in society. The essays examine the relationship between media change and social change, with particular emphasis on their contribution to social interaction in everyday life and in the reproduction of social systems.

Information Processing 92 Robert M. Aiken 1992 Paperback. Research presented in this volume covers three themes: Informatics and Education, The Vulnerability of the Information Society and Informatics for Environmental Protection. The emphasis is on putting theory into practice, therefore many of the papers report on actual experiences. Society is increasingly looking to people in the Informatics profession for assistance in solving (or at least working on) very complex and difficult problems so it is encouraging to note that two of the six streams of the conference, as well as several symposia, focus on education, social and professional issues. The papers in this volume represent insights into a number of critical issues by researchers from around the world.

Feminism Confronts Technology Judy Wajcman 2013-05-29 Feminism Confronts Technology provides a lively and engaging exploration of the impact of technology on women's lives from word processors to food processors, and genetic engineering to the design of cities. Comprehensive and critical, this book surveys the sociological and feminist literature on technology, highlighting the male bias in the way technology is defined as well as developed. Wajcman sets the scene with an overview of feminist theories of science and technology: encompassing the technologies of production and reproduction as well as domestic technology. The author challenges the common assumption that technology is gender neutral, looking at whether technology can liberate women or whether the new technologies are reinforcing sexual divisions in society.

Dictionary of Bibliometrics Virgil P Diodato 2013-01-11 Everything you need to know about Bibliometrics in a convenient, easy-to-use, mini-encyclopedia of terms and phrases! Bibliometrics, the application of mathematical and statistical techniques to the study of publishing and professional communication, is a helpful science to master in many fields. The Dictionary of Bibliometrics contains 225 non-technical definitions of key terms and phrases that will aid all who deal with this science. Each entry is briefly defined in everyday language with simple numerical examples and is followed by sample references that direct the reader to more detailed information about the entry. This is the only source with a substantial collection of bibliometric terms located in one comprehensive, easy-to-use book. Librarians who use bibliometrics to evaluate their collections, information scientists who study the theoretical aspects of bibliometrics, and subject specialists who use bibliometrics to study communication in their respective fields will save time by finding hundreds of definitions in this one-of-a-kind volume. Some of the topics covered in the Dictionary of Bibliometrics include: descriptions and examples of Bradford's law, Lotka's law, and Zipf's law various aspects of citation analysis application of bibliometrics to the study of communication in the physical and natural sciences reports of journal analyses accounts of several ways to study the obsolescence or disuse of articles in a given subject field This tool will serve anyone working or interested in the fields of publishing and professional communication. Included in the text are suggested sources of further information and an index of personal names. The Dictionary of Bibliometrics is a valuable, handy resource that you'll refer to again and again!
